000d81020f General 000d81020f Exercise 11 000d81020f
Exercise 7 000d81020f Exercise 27 000d81020f What
types of light therapy Light therapy is the application of
light rays to the skin for the treatment of wrinkles,
capillaries, pigmentation, or unwanted hair. Light therapy
uses different types of devices for example lasers, intense
pulse light (IPL) and light emitting diode Intense pulse
light devices are similar to lasers. IPL devices use past of
multiple wave links to reduce pigmentation, remove
surface capillaries and rejuvenate the skin intense pulse
light emits light absorbed by hemoglobin, melanin
pigment lesions, in hair follicles hair removal LED is a
device used to reduce acne, increase skin circulation, and
improve the collagen content in the skin. LED technology
is non-thermal, meaning it does not use heat.
Aestheticians use LED light for skin rejuvenation LED uses
visible light such as blue red or Amber, and Infrared
invisible . Different colors of light produce different effects
on the skin. LED works by releasing light onto the skin to
stimulate specific responses, add precise depths of the
skin. And depending on the type of equipment the LED
can be blue, red, yellow, or green. Red light increases
cellular processes, boost collagen and elastin and

Chapter 13 Practice Test

diabetes, and cancerous lesions; or anyone currently under a doctors care for a condition that may be Contraindicated. 000d81020f Exercise 13 000d81020f Jessner's and TCA peels | Jessner's peel is categorized as a stronger superficial peel and utilizes a Jessner's solution, which is a mixture of salicylic acid, resorcinol, lactic acid, and ethanol. You may find some of these formulas contain 2% phenol. Trichloroacetic acid peels are known as TCA peels. Some states allow aestheticians to perform superficial peeling with a Jessner's or a TCA. These peels are achieved at a superficial level by applying low percentages in fewer layers than are found with a medium level peel performed by a physician. Both Jessner's and TCA peels work on the premise of proteins coagulation; therefore there will be flaking and peeling, how much peeling will depend on the intensity of the peel and the client. These peels are not neutralized and sometimes may remain on the clients 000d81020f Cosmetology Theory Written Exam Chapter 13 Basics of Electricity - Cosmetology Theory Written Exam Chapter 13 Basics of Electricity 7 minutes, 3 seconds - Hi loves! Here's the **Chapter 13**, that everyone's been waiting for. Enjoy! Chapter 5-12 ... 000d81020f Microcurrent is used to relax muscles, and strengthen and tone the muscles by stimulating motor nerves and contractions of the muscle. Microcurrent has the ability to firm muscles and boost cellular activity. It improves blood and lymph circulation and can also assist with product absorption. Ultrasonic equipment is based on high frequency mechanical oscillations produced by a metal spatula like tool.

Chapter 13 Practice Test

Ultrasound technology and aesthetics can be used for product penetration and for cellulite reduction. The vibration created through a water medium, help cleanse and exfoliate the skin by removing dead skin cells. Ultrasound penetrate deeply stimulates tissue, increases blood flow, and promotes oxygenation. Ultrasound also sends waves through the skin to assist in product penetration. This process is called sonophoresis which is similar to iontophoresis.

treatments such as chemical exfoliation,
microdermabrasion, microcurrent, ultrasound, and light
emitting diode LED are some advance treatments in the
esthetic industry. 000d81020f It's important to
understand acid, alkaline, and PH relationships. Acids
have a pH of 0-6; neutral is 7 Alkalines range from 8 to
14. The average pH of skin is typically between 4.5 to 5.5
Buffering agents are ingredients added to products to
help them be less irritating. The acid needs to have a pH
lower than the skins pH to be effective. 000d81020f
