Levine graduated from Yale University in 1975 and earned his Ph.D. in computer science from Yale in 1984 with a thesis about the design and implementation of small databases. His doctoral advisor was Alan Perlis. His roommate at Yale was economist Paul Krugman. Levine was a co-founder and board member of Segue Software and senior programmer at Javelin Software... He worked for the American Immigration Lawyers Association in Washington, D.C., where he first became involved with the issue of spam as a result of the notorious "Green Card Lottery" spams sent by immigration lawyers Canter & Siegel. That involvement was featured in a *Wired Magazine* article in 1999. He continued... Computer viruses generally require a host program. The virus writes its own code into the host program. When the program runs, the written virus program is executed first, causing infection and damage. By contrast, a computer worm does not need a host program, as it is an independent program or code chunk. Therefore, it is not restricted by the host program, but can run independently and actively carry out attacks.

Virus writers use social engineering deceptions and exploit detailed knowledge of security vulnerabilities to initially infect systems and to spread the virus. Viruses use complex anti-detection/stealth strategies to evade antivirus software. Motives for creating viruses can include seeking profit (e.g., with ransomware), desire to send a political message, personal amusement, to demonstrate that a vulnerability exists in software, for sabotage and denial of service, or...
