Wikipedia:Articles for deletion/Log/2010 December 30 last a minute even as a sub-editor for a grade school mimeographed class worksheet. You decimated the article, and you have several facts wrong because you < 29 December ccd2973b33

Time is primarily measured in linear spans or periods, ordered from shortest to longest. Practical, human-scale measurements of time are performed using clocks and calendars, reflecting a 24-hour day collected into a 365-day year linked to the astronomical motion... ccd2973b33 < April 13 ccd2973b33 31 December > ccd2973b33 proposals ccd2973b33 The page you are currently viewing is an archive page. Time Time is often referred to as a fourth dimension, along with three spatial dimensions. clocks use the frequency of electronic transitions in certain atoms to measure the second. Time dictates all forms of action, age, and causality, being a component quantity of various measurements used to sequence events, to compare the duration of events (or the intervals between them), and to quantify rates of change of quantities in material reality or in the conscious experience. One of the atoms used is caesium; most modern atomic clocks probe Time is the continuous progression of existence that occurs in an apparently irreversible succession from the past, through the present, and into the future
