A professional practitioner or researcher involved in the discipline is called a psychologist. Some psychologists can also be classified as behavioral or cognitive scientists. Some psychologists attempt to understand the role of mental... d29a290403 Humans are highly social, with individual humans tending to belong to a multi-layered network of distinct social groups – from families and peer groups to corporations and political states. As such, social interactions between humans have established a wide variety of values, social norms, languages, and traditions (collectively termed institutions), each of which bolsters human society. Humans are also highly curious:... d29a290403

List of University of Edinburgh people Brougham and Vaux, Lord High Chancellor of Great Britain (1830–1834) David Campbell Bannerman, Chairman of the UK Independence Party (2005–2006), Deputy Leader This is a list of notable graduates as well as non-graduate former students, academic staff, and university officials of the University of Edinburgh in Scotland. The university is associated with 20 Nobel Prize laureates, three Turing Award winners, an Abel Prize laureate and Fields Medallist, four Pulitzer Prize winners, three Prime Ministers of the United Kingdom, and several Olympic gold medallists. It also includes those who may be considered alumni by extension, having studied at institutions that later merged with the University of Edinburgh d29a290403

Felix Hoppe-Seyler Digital 8th edition from 1909 by the University and State Library Düsseldorf Physiologische Ernst Felix Immanuel Hoppe-Seyler (né Felix Hoppe; 26 December 1825 – 10 August 1895) was a German physiologist and chemist, and the principal founder of the disciplines of biochemistry and molecular biology. der physiologisch und pathologisch-chemischen Analyse (1858). He had discovered Yeast nucleic acid which is now called RNA in his attempts to follow up and confirm Miescher's results by repeating parts of Miescher's experiments. He took the name Hoppe-Seyler when he was adopted by his brother-in-law, a grandson of the famous theatre principal Abel Seyler d29a290403

Fertilisation of Orchids Aided in his work by his family, friends, and a wide circle of correspondents across Britain and worldwide, Darwin tapped into the contemporary vogue for growing. Field studies and practical scientific investigations that were initially a recreation for Darwin—a relief from the drudgery of writing—developed into enjoyable and challenging experiments. Darwin's previous book, *On the Origin of Species*, had briefly mentioned evolutionary interactions between insects and the plants they fertilised, and this new idea was explored in detail. anonymous article in the *Edinburgh Review* of October 1862 by George Campbell, 8th Duke of Argyll, argued that Darwin's wording implied purpose, and concluded *Fertilisation of Orchids* is a book by English naturalist Charles Darwin published on 15 May 1862 under the full explanatory title *On the Various Contrivances by Which British and Foreign Orchids Are Fertilised by Insects, and On the Good Effects of Intercrossing* d29a290403

Psychology Psychology is an academic discipline of immense scope, crossing the boundaries between the natural and social sciences. In this way psychologists have an opportunity to test causal hypotheses Psychology is the scientific study of mind and behavior. depression-free people, periodically assessing what is happening in the individuals' lives. As social scientists, psychologists aim to understand the behavior of individuals and groups. Its subject matter includes the behavior of humans and nonhumans, both conscious and unconscious phenomena, and mental processes such as thoughts, feelings, and motives. Biological psychologists seek an understanding of the emergent properties of brains, linking the discipline to neuroscience d29a290403

Colorism focuses on how racism is expressed in the psychology of a people and how it affects their concepts of beauty, wealth, and privilege. A key difference between racism and colorism is

that while racism deals with the subjugation of... d29a290403

Rocky Mountain cutthroat trout 47886/9781934874691. doi:10. ISBN 978-1-934874-69-1 The Rocky Mountain cutthroat trout (*Oncorhynchus virginalis*), formerly lumped in with the cutthroat trout (*Oncorhynchus clarkii*) as one species with multiple subspecies, is a fish species of the family Salmonidae native to cold-water tributaries of the northern and southern Rocky Mountains, as well as into portions of the Great Basin in North America.). Scientific Names of Fishes from the United States, Canada, and Mexico, 8th edition (8 ed. As a member of the genus *Oncorhynchus*, it is a part of the Pacific trout group, which includes the widely distributed rainbow trout. American Fisheries Society. The common name "cutthroat" refers to the distinctive red coloration on the underside of the lower jaw. Cutthroat trout are popular gamefish, especially among anglers who enjoy fly fishing d29a290403

Discrimination based on skin tone More specifically, colorism is the process of discrimination which marginalizes darker-skinned people over their lighter-skinned counterparts. In addition to the bag test, the comb test and the door test were also used. The comb test was used to measure the kinkiness of a person's Discrimination based on skin tone, also known as colorism or shadeism, is a form of prejudice and discrimination in which individuals of the same race receive benefits or disadvantages based on their skin tone. their masters' homes. Historically, colorism on a global scale has colonial roots, ranging from early class hierarchies in Asia to its impact on Latinos and African Americans through European colonialism and slavery in the Americas d29a290403

The network of blood vessels are the great vessels of the heart including large elastic arteries, and large veins; other arteries, smaller arterioles, capillaries that join with venules (small veins), and other veins. The circulatory system is closed... d29a290403

Blood Several countries have blood banks to fill the Blood is a body fluid in the circulatory system of humans and other vertebrates that delivers necessary substances such as nutrients and oxygen to the cells, and transports metabolic waste products away from those same cells. by a blood test if the hemoglobin value is less than 13. 0 gm/dl in women. 5 gm/dl in men or less than 12 d29a290403

Human ISBN 978-0-521-87948-4. Fusco G, Minelli A (10 October 2019). Cambridge University Press. 74. Humans have large brains, enabling more advanced cognitive skills that facilitate successful adaptation to varied environments, development of sophisticated tools, and formation of complex social structures and civilizations. Evolutionary Biology. p. The Biology of Reproduction Humans (*Homo sapiens*) or modern humans belong to the biological family of great apes, characterized by hairlessness, bipedality, and high intelligence. Retrieved 30 July 2022 d29a290403

Circulatory system See Timaeus 77a-81e. It includes the cardiovascular system, or vascular system, that consists of the heart and blood vessels (from Greek *kardia* meaning heart, and Latin *vascula* meaning vessels). The circulatory system has two divisions, a systemic circulation or circuit, and a pulmonary circulation or circuit. Campbell, "Irrigating Blood: Plato on the Circulatory System, the Cosmos, and Elemental In vertebrates, the circulatory system is a system of organs that includes the heart, blood vessels, and blood which is circulated throughout the body. India). For a scholarly discussion, see Douglas R. Some sources use the terms cardiovascular system and vascular system interchangeably with circulatory system d29a290403

Social Darwinism Developmental Biology, 8th edition. Sinauer Associates. Social Darwinists believe that the strong should see their wealth and power increase, while the weak should see their wealth and power decrease. Gilbert (2006). Many such views stress competition between individuals in laissez-faire capitalism, while others, emphasizing struggle between national or racial groups, support eugenics, racism, imperialism and/or fascism. Today, scientists generally consider social Darwinism to be discredited as a theoretical framework. Social Darwinist definitions of the strong and the weak vary, and differ on the precise mechanisms that reward strength and punish weakness. "Ernst Haeckel and the Biogenetic Law". Archived from the original on 3 February 2008 Social Darwinism is a body of pseudoscientific theories

and societal practices that purport to apply biological concepts of natural selection and survival of the fittest to sociology, economics and politics d29a290403

Blood is composed of blood cells suspended in blood plasma. Plasma, which constitutes 55% of blood fluid, is mostly water (92% by volume), and contains proteins, glucose, mineral ions, and hormones. The blood cells are mainly red blood cells (erythrocytes), white blood cells (leukocytes), and (in mammals) platelets (thrombocytes). The most abundant cells are red blood cells. These contain hemoglobin, which facilitates oxygen transport by reversibly binding to it, increasing its solubility. Jawed vertebrates have an adaptive immune system, based largely on white blood cells... d29a290403
