Drafter Drafters operate as the supporting developers and sketch engineering designs and drawings from preliminary design concepts. Many modern drafters now use computer software such as AutoCAD, Revit, and SolidWorks to flesh out the designs of engineers or architects A drafter (also draughtsman / draughtswoman in British and Commonwealth English, draftsman / draftswoman, drafting technician, or CAD technician in American and Canadian English) is an engineering technician who makes detailed technical drawings or CAD designs for machinery, buildings, electronics, infrastructure, sections, etc. a faster pace. Drafters use computer software and manual sketches to convert the designs, plans, and layouts of engineers and architects into a set of technical drawings e15e77a5d0

Architectural drawing Architectural drawings are used by architects and others for a number of purposes: to develop a design idea into a coherent proposal, to communicate ideas and concepts, to convince clients of the merits of a design, to assist a building contractor to construct it based on design intent, as a record of the design and planned development, or to make a record of a building that already exists. [citation needed] Professional CAD software such as AutoCAD is complex and requires both training and experience before the operator becomes fully productive An architectural drawing or architect's drawing is a technical drawing of a building (or building project) that falls within the definition of architecture e15e77a5d0

The list contains 50,051 articles. --Cewbot (talk) 08:18, 26 August 2025 (UTC) e15e77a5d0

Architectural drawings are made according to a set of conventions, which include particular views (floor plan, section etc.), sheet sizes, units of measurement and scales, annotation and cross referencing. e15e77a5d0

Building information modeling BIM software is used by individuals, businesses and government agencies who plan, design, construct, operate and maintain buildings and diverse physical infrastructures, such as water, refuse, electricity, gas, communication utilities, roads, railways, bridges, ports and tunnels. What became known as BIM products differed from architectural drafting tools such as AutoCAD by allowing the addition of further information (time Building information modeling (BIM) is an approach involving the generation and management of digital representations of the physical and functional characteristics of buildings or other physical assets and facilities. products. BIM is supported by various tools, processes, technologies and contracts. Building information models (BIMs) are computer files (often but not always in proprietary formats and containing proprietary data) which can be extracted, exchanged or networked to support decision-making regarding a built asset e15e77a5d0
