Pigging Adapted from Amoco P&ID of pig launcher and Operating Manual 1988 "NTS Maps Google My Maps". Retrieved 2010-04-14. Retrieved - In pipeline transportation, pigging is the practice of using pipeline inspection gauges or gadgets, devices generally referred to as pigs or scrapers, to perform various maintenance operations. com. Google. This is done without stopping the flow of the product in the pipeline. on 2010-04-13 09f8a6261c

Anchor floating platform with precise positioning and alignment, such as when drilling the seabed, for some types of salvage work, and for some types of diving An anchor is a device, normally made of metal, used to secure a vessel to the bed of a body of water to prevent the craft from drifting due to wind or current.

The word derives from Latin ancora, which itself comes from the Greek ἄγκυρα (ankȳra) 09f8a6261c

Permanent anchors are used in the creation of a mooring, and are rarely moved; a specialist service is normally needed to move or maintain them. Vessels carry one or more temporary anchors, which may be of different designs and weights. 09f8a6261c It is a vertically integrated company operating in all areas of the oil and gas industry, including exploration and extraction, refining, distribution and marketing, power generation, and trading. 09f8a6261c These operations include but are not limited to cleaning and inspecting the pipeline. This is accomplished by inserting the pig into a "pig launcher" (or "launching

station")—an oversized section in the pipeline, reducing to the normal diameter. The launching station is then closed and the pressure-driven flow of the product in the pipeline is used to push the pig along the pipe until it reaches the receiving trap—the "pig catcher" (or "receiving station"). 09f8a6261c

Fracking in the United States The output from these wells makes up 43% of the oil production and 67% of the natural gas production in the United States. According to the Department of Energy (DOE), by 2013 at least two million oil and gas wells in the US had been hydraulically fractured, and that of new wells being drilled, up to 95% are hydraulically fractured. sites and to report the fluids and chemicals used while drilling and fracking, except for those considered

proprietary. Environmental safety and health concerns about hydraulic fracturing emerged in the 1980s, and are still being debated at the state and federal levels. Companies will also be required Fracking in the United States began in 1949

Deepwater Horizon oil spill After several failed efforts to contain the flow, the well was declared sealed on 19 September 2010. The Deepwater Horizon. Reports in early 2012 indicated that the well site was still leaking. response training by companies and individuals responsible for drilling at the Macondo well and for the operation of the drilling platform. 9 million barrels (210,000,000 US gal; 780,000 m3). On 16 June The Deepwater Horizon oil spill was an environmental disaster beginning 20 April 2010 off the coast of the United States in the Gulf of Mexico, on the BP-operated Macondo Prospect. Caused in the aftermath of a blowout and

explosion on the Deepwater Horizon oil platform, the United States federal government estimated the total discharge at 4. It is considered the largest marine oil spill in the history of the petroleum industry and estimated to be 8 to 31 percent larger in volume than the previous largest, the Ixtoc I oil spill, also in the Gulf of Mexico 09f8a6261c

A sea anchor is a drag device, not in contact with the seabed, used to minimize drift of a vessel relative to the water. A drogue is a drag device used to slow or help steer a vessel running before a storm in a following or overtaking sea, or when crossing a bar in a breaking... 09f8a6261c New York banned massive hydraulic fracturing by executive order in 2010, so all natural gas production in the state is from wells drilled prior to the ban. Vermont, which has no known frackable gas reserves, banned fracking preventatively in May 2012. In March 2017, Maryland... 09f8a6261c
