270ca991f5 157 270ca991f5 The component ions in a salt can be either inorganic,
such as chloride (Cl^-), or organic, such as acetate (CH_3COO^-). Each ion can be
either monatomic, such as sodium (Na^+) and chloride (Cl^-) in sodium chloride, or

polyatomic, such as ammonium (NH_4^+) and carbonate (CO_3^{2-}) ions in ammonium carbonate. Salts containing basic ions hydroxide (OH^-) or oxide (O^{2-}) are classified as bases, such as sodium hydroxide and potassium oxide. 270ca991f5 21
270ca991f5 118 270ca991f5 52 270ca991f5 I'm nominating this article for featured article because I feel it is ready. It meets most criteria, and it is very possible that this could be a big benefit to NYSR. The article went through a PR, without much results. However, I feel with more editors around, that FAC may prove to give more results than PR did. Thanks! 32 13:27, 27 April 2008 (UTC)[reply] 270ca991f5 14
