Hydrogen isotope biogeochemistry Understanding isotopic fingerprints and the sources of fractionation that lead to variation between them can be applied to address a diverse array of questions ranging from ecology and hydrology to geochemistry and paleoclimate reconstructions. The isotopic composition of the resulting precipitation (Rp) can be derived from the composition of the remaining vapor: $R_p / R_r = (\text{Hydrogen isotope biogeochemistry (HIBGC) is the scientific study of biological, geological, and chemical processes in the environment using the distribution and relative abundance of hydrogen isotopes. Since specialized techniques are required to measure natural hydrogen isotopic composition (HIC), HIBGC provides uniquely specialized. factor } (\alpha=1+\epsilon). \text{ The ratio between these two species can be called the hydrogen isotopic signature of a substance. Hydrogen has two stable isotopes, protium } ^1\text{H} \text{ and deuterium } ^2\text{H}, \text{ which vary in relative abundance on the order of hundreds of permil}$
