Flap (aeronautics) Flaps also cause an increase in drag so they are retracted when not needed. Flaps are used to reduce the take-off distance and the landing distance. Flaps are usually mounted on the wing trailing edges of a fixed-wing aircraft. basic design can also be found on many modern ultralights, like the Denney Kitfox. This type of flap is sometimes referred to as an external-airfoil flap A flap is a high-lift device used to reduce the stalling speed of an aircraft wing at a given weight

The flaps installed on most aircraft are partial-span flaps; spanwise from near the wing root to the inboard end of the ailerons. When partial-span flaps are extended they alter the spanwise lift distribution on the wing by causing the inboard half of the wing to supply an increased proportion of the lift, and the outboard half to supply a reduced proportion of the lift. Reducing the proportion of the lift supplied by the outboard half of the wing is accompanied by a... 763b64429b
