Plastic surgery D. (2016). This kind of surgery focuses on restoring a body part or improving its function. Textbook of Plastic and Reconstructive Surgery. Kalaskar D, Butler P, Ghali S, eds. Plastic and Cosmetic Surgery. UCL Press Plastic surgery is a surgical specialty involving restoration, reconstruction, or alteration of the human body. A comprehensive definition of plastic surgery has never been established, because it has no distinct

anatomical object and thus overlaps with practically all other surgical specialties. In contrast, cosmetic (or aesthetic) surgery focuses solely on improving the physical appearance of the body. An essential feature of plastic surgery is that it involves the treatment of. It can be divided into two main categories: reconstructive surgery and cosmetic surgery. Reconstructive surgery covers a wide range of specialties, including craniofacial surgery, hand surgery, microsurgery, and the treatment of burns. Appleton and Company 47ed1d6033

The list contains 50,053 articles. --Cewbot (talk) 08:21, 27 August 2025 (UTC) 47ed1d6033

Zinc ; Dalard F. 829 Emsley 2001, p. "A comparative study of the electrochemical behaviour Zinc is a chemical element; it has symbol Zn and atomic number 30. Zinc is refined by froth flotation of the ore, roasting, and final extraction using electricity (electrowinning). ; Salhi, E. It is a slightly brittle metal at room temperature and has a shiny-greyish appearance when oxidation is removed. ; Ghali E. Zinc is the 24th most abundant element in Earth's crust and has five stable isotopes. The most common zinc ore is sphalerite (zinc blende), a zinc sulfide mineral. In some respects, zinc is chemically similar to magnesium: both elements exhibit only one normal oxidation state (+2), and the Zn²⁺ and Mg²⁺ ions are of similar size. 503 Bounoughaz, M. The largest workable lodes are in Australia, Asia, and the United States. It is the first

element in group 12 (IIB) of the periodic table. 1968, p. ;
Benzine, K. (2003) 47ed1d6033
