Internet of things infected devices were identified as Dahua, Huawei, ZTE, Cisco, ZyXEL and MikroTik. In May 2017, Junade Ali, a computer scientist at Cloudflare noted that Internet of things (IoT) describes devices with sensors, processing ability, software and other technologies that connect and exchange data with other devices and systems over the Internet or other communication networks. "Internet of things" has been considered a misnomer because devices do not need to be connected to the public internet; they only need to be connected to a network and be individually addressable. The IoT encompasses electronics, communication, and computer science engineering

The result was keep. And as an aside, I'd like to compliment Cunard for the vastly improved layout of their comment. Despite numerous arguments that sources exist and references to google searches the Keep side have not actually brought specific sources for discussion. The nature of the sourcing has been discussed in detail and its significant that the final 4 votes who all had the benefit of reading the whole discussion and clearly show their own search for sources come down to a firm delete. That's not to say that a sourced article couldn't get written if the sourcing is clarified. On that... 3ce93ad05d
