Glossary of engineering: A-L Electric field surrounds This glossary of engineering terms is a list of definitions about the major concepts of engineering. Sources of mechanical energy include steam turbines, gas turbines, water turbines, internal combustion engines and even hand cranks. Please see the bottom of the page for glossaries of specific fields of engineering c2962c0a94

Heat transfer The internal combustion engine and the gas turbine are examples of such devices, and calling these heat engines is an acceptable use of the term Heat transfer is a discipline of thermal engineering that concerns the generation, use, conversion, and exchange of thermal energy (heat) between physical systems. While these mechanisms have distinct characteristics, they often occur simultaneously in the same system. cycle. Engineers also consider the transfer of mass of differing chemical species (mass transfer in the form of advection), either cold or hot, to achieve heat transfer. Heat transfer is classified into various mechanisms, such as thermal conduction, thermal convection, thermal radiation, and transfer of energy by phase changes c2962c0a94
