Disease physiological diseases. A disease may be caused by external factors such as pathogens or by internal dysfunctions. The deadliest diseases in humans A disease is a particular abnormal condition that adversely affects the structure or function of all or part of an organism and is not immediately due to any external injury. Diseases can also be classified in other ways, such as communicable versus non-communicable diseases. Diseases are often known to be medical conditions that are associated with specific signs and symptoms. For example, internal dysfunctions of the immune system can produce a variety of different diseases, including various forms of immunodeficiency, hypersensitivity, allergies, and autoimmune disorders 880a90fc02
