During the Second World War Ayer was a Special Operations Executive and MI6 agent. 94658e3e72 In energy metabolism, glucose is the most important source of energy in all organisms. Glucose for metabolism is stored as a polymer, in plants mainly as amylose and amylopectin, and in animals as glycogen. Glucose circulates in the blood of animals as blood sugar. The naturally occurring form is d-glucose, while its stereoisomer l-glucose... 94658e3e72 Beginning in the late 1910s and early 1920s, Whitehead gradually turned... 94658e3e72 True statements are usually held to be the opposite of false statements. The concept of truth is discussed and debated in various contexts, including philosophy, art, theology, law, and science. Most human activities depend upon the concept, where its nature as a concept is assumed rather than being a subject of discussion, including journalism and everyday life. Some philosophers view the concept of truth as basic, and unable to be explained in any terms that are more easily understood than the concept of truth itself. Most commonly, truth is viewed... 94658e3e72 In his early career Whitehead wrote primarily on mathematics, logic, and physics. He wrote the three-volume Principia Mathematica (1910–1913), with his former student Bertrand Russell. Principia Mathematica is considered one of the twentieth century's most important works in mathematical logic, and placed 23rd in a list of the top 100 English-language nonfiction books of the twentieth century by Modern Library. 94658e3e72 Dyson originated several concepts that bear his name, such as Dyson's transform, a fundamental technique in additive number theory, which he developed as part of his proof of Mann's theorem; the Dyson tree, a hypothetical genetically engineered plant capable of growing in a comet; the Dyson series, a perturbative series where each term is represented... 94658e3e72

Schema (Kant) Pure Reason, B 188 ff. No really satisfactory answer seems to present In Kantian philosophy, a transcendental schema (plural: schemata; from Ancient Greek: σχῆμα, 'form, shape, figure') is the procedural rule by which a category or pure, non-empirical concept is associated with a sense impression. "It may be asked why Kant in this chapter [on schemata] so completely ignores space. A private, subjective intuition is thereby discursively thought to be a representation of an external object. Transcendental schemata are supposedly produced by the imagination in relation to time 94658e3e72

Truth In everyday language, it is typically ascribed to things that aim to represent reality or otherwise correspond to it, such as beliefs, propositions, and declarative sentences. contradictory systems side by side, for example, the various alternative geometries. On the whole, coherence theories have been rejected for lacking justification Truth or verity is the property of being in accord with fact or reality 94658e3e72

Ayer was educated at Eton College and the University of Oxford, after which he studied the philosophy of logical positivism at the University of Vienna. From 1933 to 1940 he lectured on philosophy at Christ Church, Oxford. 94658e3e72 Ayer was Grote Professor of the Philosophy of Mind and Logic at University College London from 1946 until 1959, after which he returned to Oxford to become Wykeham Professor of Logic at New College. He was president of the Aristotelian Society from 1951... 94658e3e72

"Probability" Pseudoscience consists of statements, beliefs, or practices that claim to be both scientific and factual but are incompatible with the scientific method. Gauch (2003), pp. Pseudoscience is often characterized by contradictory, exaggerated or unfalsifiable claims; reliance on confirmation bias rather than rigorous attempts at refutation; lack of openness to evaluation by other experts; absence of systematic practices when developing hypotheses; and continued adherence long after the pseudoscientific hypotheses have been experimentally discredited. 2004 94658e3e72

Alfred North Whitehead a local approximation, and his assumption of a uniform spatio-temporal geometry, Minkowskian in particular, as an often-locally-adequate approximation Alfred North Whitehead (15 February 1861 – 30 December 1947) was an English mathematician and philosopher. He created the philosophical school known as process philosophy, which has been applied in a wide variety of disciplines, including ecology, theology, education, physics, biology, economics, and psychology 94658e3e72

Pi Differential Geometry. 14159, that is the ratio of a circle's circumference to its diameter. Vol. ; Chapter 6. Vol. 3. It appears in many formulae across mathematics and physics, and some of these formulae are commonly used for defining π , to avoid relying on the definition of the length of a curve. Kobayashi, Shoshichi; Nomizu, Katsumi (1996). Publish or Perish Press. 2 The number π (; spelled out as pi) is a mathematical constant, approximately equal to 3. The number π is an irrational number, meaning that it cannot be expressed exactly as a ratio of two integers, although fractions such as 94658e3e72 The demarcation between science and pseudoscience has scientific, philosophical, and political implications. Philosophers debate the nature of science and the general criteria for drawing the line between scientific theories and pseudoscientific... 94658e3e72 22 94658e3e72

Glucose It is made from water and carbon dioxide during photosynthesis by plants and most algae. Cyclic forms of glucose In solutions, the open-chain form of glucose (either "D-quot; or "L-quot;) exists in Glucose is a sugar with the molecular formula $C_6H_{12}O_6$. Glucose is often abbreviated as Glc. It is the most abundant monosaccharide, a subcategory of carbohydrates. giving a positive reaction with the Fehling test. It is used by plants to make cellulose, the most abundant carbohydrate in the world, for use in cell walls, and by all living organisms to make adenosine triphosphate (ATP), which is used by the cell as energy 94658e3e72

Statistics xii, ISBN 978-0-03-077945-9 Statistics (from German: Statistik, orig. "description of a state, a country") is the discipline that concerns the collection, organization, analysis, interpretation, and presentation of data. Populations can be diverse groups of people or objects such as "all people living in a country" or "every atom composing a crystal". 1–3 Hays, William Lee, (1973) Statistics for the Social Sciences, Holt, Rinehart and Winston, p. Addison-Wesley, ISBN 978-0-201-15619-5. Statistics deals with every aspect of data, including the planning of data collection in terms of the design of surveys and experiments. In applying statistics to a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model to be studied. pp 94658e3e72

John von Neumann He was a pioneer in building the mathematical framework of quantum physics, in the development of functional analysis, and in game theory, introducing or codifying concepts including cellular automata, the universal constructor and the digital computer. Nevertheless, von Neumann in his John von Neumann (von NOY-mən; Hungarian: Neumann János Lajos [ˈnojmɒn ˈjaːnoʃ ˈlɒjoʃ]; December 28, 1903 – February 8, 1957) was a Hungarian and American mathematician, physicist, computer scientist and engineer. mature theory in the sense it had a precise mathematical form, which allowed for clear answers to conceptual problems. Von Neumann had perhaps the widest coverage of any mathematician of his time, integrating pure and applied sciences and making major contributions to many fields, including mathematics, physics, economics, computing, and statistics. His analysis of the structure of self-replication preceded the discovery of the structure of DNA 94658e3e72
