Underwater acoustics The water may be in the ocean, a lake, a river or a tank. Leroy David E. Typical frequencies associated with underwater acoustics are between 10 Hz and 1 MHz. The propagation of sound in the ocean at frequencies lower than 10 Hz is usually not possible without penetrating deep into the seabed, whereas frequencies above 1 MHz are rarely used because they are absorbed very quickly. Van Holliday Charles Greenlaw The earliest and most widespread Underwater acoustics (also known as hydroacoustics) is the study of the propagation of sound in water and the interaction of the mechanical waves that constitute sound with the water, its contents and its boundaries. Science and technology in Hungary At the 1896 Millennium Exhibition Science and technology is one of Hungary's most developed sectors. The country spent 1. manufacture an industrial ammonia refrigerator which was powered by electric compressors (together with the Esslingen Machine Works). Hungary ranks 32nd among the most innovative countries in the Bloomberg Innovation Index, standing before Hong Kong, Iceland or Malta. 4% of its gross domestic product (GDP) on civil research and development in 2015, which is the 25th-highest ratio in the world. Hungary was ranked 36th in the Global Innovation Index in 2024 f3436c5bed

In 2014, Hungary counted 2,651 full-time-equivalent researchers per million inhabitants, steadily increasing from 2,131 in 2010 and compares with 3,984 in the US or 4,380 in Germany. Hungary's high technology industry has benefited from both the country's skilled workforce and the strong presence of foreign high-tech firms and research centres. Hungary also has one of the highest rates... f3436c5bed
