Timber rattlesnake C. Like all other pit vipers, it is venomous, with a very toxic bite. There are no subspecies that are recognized as being valid. The species is native to the eastern United States. horridus is the only rattlesnake species in most of the populous Northeastern United States and is second only to its relatives to the west, the prairie rattlesnake, as the most northerly distributed venomous snake in North America. A Check List of North American Amphibians and Reptiles, Sixth Edition. Schmidt KP (1953). Its venom is extremely potent, and both hemorrhagic and neurotoxic venom are present depending on population and location. Chicago: American Society of Ichthyologists and Herpetologists The timber rattlesnake (Crotalus horridus), also known commonly as the canebrake rattlesnake and the banded rattlesnake, is a species of pit viper in the family Viperidae

Along with bisexuality and heterosexuality, homosexuality is one of the three main categories of sexual orientation within the heterosexual–homosexual continuum. Although no single theory on the cause of sexual orientation has yet gained widespread support, scientists favor biological theories. There is considerably more evidence supporting nonsocial, biological causes of sexual orientation than social ones, especially for males. A major hypothesis implicates the prenatal environment, specifically the organizational effects of hormones on the fetal brain. There is no substantive evidence... 577e7be4d8 A professional practitioner or researcher involved in the discipline is called a psychologist. Some psychologists can also be classified as behavioral or cognitive scientists. Some psychologists attempt to understand the role of mental... 577e7be4d8

Sex pp. By convention, organisms that produce smaller, more mobile gametes (spermatozoa, sperm) are called male, while organisms that produce larger, non-mobile gametes (ova, often called egg cells) are called female. The science of behavior. 140–141. WHO. An organism that produces both types of gamete is a hermaphrodite. Fourth Canadian edition. Pearson. ISBN 978-0205702862. Archived from the original on Sex is the biological trait that determines whether a sexually reproducing organism produces male or female gametes. "Gender and Genetics". During sexual reproduction, a male and a female gamete fuse to form a zygote, which develops into an offspring that inherits traits from each parent 577e7be4d8

Sociobiological theories of rape Behavior resembling rape in humans can be seen in the animal kingdom, including ducks and geese[citation needed] Sociobiological theories of rape explore how evolutionary adaptation influences the psychology of rapists. their book A Natural History of Rape (2000). Some object to such theories on ethical, religious, political, or scientific grounds. Such theories are highly controversial, as traditional theories typically do not consider rape a behavioral adaptation. Others argue correct knowledge of rape causes is necessary for effective preventive measures 577e7be4d8

Learning The ability to learn is possessed by humans, non-human animals, and some machines; there is also evidence for some kind of learning in certain plants. Some learning is immediate, induced by a single event (e. understanding, knowledge, behaviors, skills, values, attitudes, and preferences. g. The changes induced by learning often last a lifetime, and it is hard to distinguish learned material that seems to be "lost" from that which cannot be retrieved. being burned by a hot stove), but much skill and knowledge accumulate from repeated experiences. The ability to learn is possessed by humans, non-human animals, and some machines; Learning is the process of acquiring new understanding, knowledge, behaviors, skills, values, attitudes, and preferences 577e7be4d8

Dogs have been bred for desired behaviors, sensory capabilities, and physical attributes. Dog breeds vary widely in shape, size, and color. They have the same number of bones (with the exception of the tail), powerful jaws that house around 42 teeth, and well-developed senses of smell, hearing, and... 577e7be4d8 Some elements of humanistic psychology are 577e7be4d8 Bateson's interest in systems theory forms a thread running through his work. He was one of the original members of the core group of the Macy conferences in Cybernetics (1941–1960), and the later set on Group Processes (1954–1960), where he represented the social and behavioral sciences. He was interested in the relationship of these fields to epistemology. His association with the editor... 577e7be4d8 Contemporary research has steered away from attempting to teach apes human language and focuses instead on observing apes' intraspecies communication in zoos and natural habitats. This includes gestures, facial expressions, and vocalizations. 577e7be4d8

Gregory Bateson doi:10. His writings include Steps to an Ecology of Mind (1972) and Mind and Nature (1979). (1 April 1967). The American Behavioral Scientist. "Cybernetic Explanation". 1177/0002764201000808. 10 (8): 29–32. S2CID 220678731 Gregory Bateson (9 May 1904 – 4 July 1980) was an English anthropologist, social scientist, linguist, visual anthropologist, semiotician, and cyberneticist whose work intersected that of many other fields. Bateson, G 577e7be4d8

Dog Also called the domestic dog, it was selectively bred from a population of wolves during the Late Pleistocene by hunter-gatherers. The dog was the first species to be domesticated by humans, over 14,000 years ago and before the development of agriculture. Feyrecilde M, Horwitz D, Landsberg G. VCA Animal Hospitals. Archived from the original on 21 January 2024. Due to their long association with humans, dogs have gained the ability to thrive on a starch-rich diet that would be inadequate for other canids. "Dog Behavioral Problems: Marking Behavior". Retrieved The dog (Canis familiaris or Canis lupus familiaris) is a domesticated descendant of the gray wolf 577e7be4d8

In non-hermaphroditic species, the sex of an individual is determined through one of several biological sex-determination systems. Most mammalian species have the XY sex-determination system, where the male usually carries an X and a Y chromosome (XY),... 577e7be4d8

Humanistic psychology F. Thus, Abraham Maslow established the need for a "third force" in psychology. Severin (Ed.), Humanistic viewpoints in psychology: A book of readings (pp. The school of thought of humanistic psychology gained traction due to Maslow in the 1950s. New York, Humanistic psychology is a psychological perspective that arose in the mid-20th century in answer to two theories: Sigmund Freud's psychoanalytic theory and B. 387-407). In F. Skinner's behaviorism. T. in the new world of the

behavioral sciences 577e7be4d8

to understand people, ourselves and others holistically (as wholes greater than the sums of their parts) 577e7be4d8 to recognize the importance of an end goal of life for a healthy person 577e7be4d8 to acknowledge the relevance and significance of the full life history of an individual 577e7be4d8 Human learning starts at birth (it might even start before) and continues until death as a consequence of ongoing interactions between people and their environment. The nature and processes involved in learning... 577e7be4d8

Homosexuality Homosexual behavior has also been documented in many non-human animal species, though domestic sheep are the only conclusively Homosexuality is romantic attraction, sexual attraction, or sexual behavior between people of the same sex or gender. It also denotes identity based on attraction, related behavior, and community affiliation. such as heterosexism or homophobia 577e7be4d8

In Palo Alto, California, Bateson and in these days his non-colleagues developed the double-bind theory of schizophrenia. 577e7be4d8 Humanistic psychology also acknowledges spiritual aspiration as an integral... 577e7be4d8 to acknowledge the importance of intentionality in human existence 577e7be4d8

Psychology Some psychologists attempt to understand the role of mental functions in individual and social behavior. Psychology is an academic discipline of immense scope, crossing the boundaries between the natural and social sciences. classified as behavioral or cognitive scientists. Others Psychology is the scientific study of mind and behavior. As social scientists, psychologists aim to understand the behavior of individuals and groups. Biological psychologists seek an understanding of the emergent properties of brains, linking the discipline to neuroscience. Its subject matter includes the behavior of humans and nonhumans, both conscious and unconscious phenomena, and mental processes such as thoughts, feelings, and motives 577e7be4d8

Great ape language These studies were controversial, with debate focused on the definition of language, the welfare of test subjects, and the anthropocentric nature of this line of inquiry. 7 February 2008 at the Wayback Machine – "Animal Communication" (from the book Language Files, Sixth Edition), editors: Stefanie Jannedy, Robert Poletto Great ape language research historically involved attempts to teach chimpanzees, bonobos, gorillas, and orangutans to communicate using imitative human speech, sign language, physical tokens and computerized lexigrams 577e7be4d8
