Collective memory ff2ed8df44 HD Radio transmits the digital signals in unused portions of the same band as the analog AM and FM signals. As a result, radios are more easily designed to pick up both signals, which is why the HD in HD Radio is sometimes referred to stand for "hybrid digital", not "high definition". Officially, HD is not intended to stand for any term in HD Radio, it is simply part of iBiquity's trademark... ff2ed8df44

Field-sequential color system system was developed in 1940 by Peter Goldmark for CBS, which was its sole user in commercial broadcasting. However, a few months later, CBS ended color broadcasting on October 20, 1951. In March 1953, CBS withdrew its color system as a standard, creating an opening for all-electronic color systems from other manufacturers. The Federal Communications Commission adopted A field-sequential color system (FSC) is a color television system in which the primary color information is transmitted in successive images and which relies on the human vision system to fuse the successive images into a color picture. One field-sequential system was developed in 1940 by Peter Goldmark for CBS, which was its sole user in commercial broadcasting. The Federal Communications Commission adopted it on October 11, 1950, as the standard for color television in the United States. Its regular broadcast debut was on June 25, 1951 ff2ed8df44

Dolby Atmos Following the release of Atmos for the cinema market, a variety of consumer technologies have been released under the Atmos brand. VR Audio Auro-3D, a similar, completely channel-based 3D surround system DTS:X, a competing fully object-based system MPEG-H 3D Audio Sound Blaster X-Fi Dolby Atmos is a surround sound technology developed by Dolby Laboratories. Atmos is also used on some devices that do not have a height channel, such as headphones, televisions, mobile phones, and tablets. It expands on existing surround sound systems by adding height channels as well as free-

moving sound objects, interpreted as three-dimensional objects with neither horizontal nor vertical limitations. The initial cinema Atmos systems used in-ceiling speakers, then upward-firing speakers (e. for soundbars) were introduced as an alternative for consumer products. g ff2ed8df44
