Most hash table designs employ an imperfect hash function. Hash collisions, where the hash function generates the same index for more than one key, therefore typically must be accommodated in some way. 60e9273867

Hash table 6th Conference on Very In computer science, a hash table is a data structure that implements an associative array, also called a dictionary or simply map; an associative array is an abstract data type that maps keys to values. "Linear hashing: A new tool for file and table addressing" (PDF). A map implemented by a hash table is called a hash map. Proc. During lookup, the key is hashed and the resulting hash indicates where the corresponding value is stored. Litwin, Witold (1980). A hash table uses a hash function to compute an index, also called a hash code, into an array of buckets or slots, from which the desired value can be found.
