Human brain Numerous techniques The human brain is the central
organ of the nervous system, and with the spinal cord, comprises

the central nervous system. It consists of the cerebrum, the brainstem and the cerebellum. The brain controls most of the activities of the body, processing, integrating, and coordinating the information it receives from the sensory nervous system. The study of the anatomy of the brain is neuroanatomy, while the study of its function is neuroscience. from other sites in the body. The brain integrates sensory information and coordinates instructions sent to the rest of the body

Attention deficit hyperactivity disorder "[Structural and functional neuroanatomy of attention-deficit hyperactivity disorder (ADHD)]" [Structural and functional neuroanatomy of attention-deficit hyperactivity Attention deficit hyperactivity disorder (ADHD) is a neurodevelopmental disorder characterised by symptoms of inattention, hyperactivity, impulsivity, and emotional dysregulation that are excessive and pervasive, impairing in multiple contexts, and developmentally inappropriate. ADHD symptoms arise from executive dysfunction 3efcffe20

entriesWP:JCW/POP (t) 3efcffe20 6 3efcffe20 The cerebrum, the
largest part of the human brain, consists of two cerebral
hemispheres. Each hemisphere has an inner core composed of white
matter, and an outer surface – the cerebral cortex – composed of
grey matter. The cortex has an outer layer, the neocortex, and an
inner allocortex. The neocortex is made up of six neuronal
layers, while the allocortex... 3efcffe20

deficits in self-regulation such as time management, inhibition,
task initiation, and sustained attention can include poor

professional performance, relationship difficulties, and numerous health risks, collectively predisposing to a diminished quality of life and a reduction in life expectancy. As a consequence, the disorder costs society hundreds of billions of US dollars each year, worldwide. It is associated with other mental disorders as... 3efcfffec20 1050 3efcfffec20 Q 3efcfffec20 11 3efcfffec20 1700 3efcfffec20 2 3efcfffec20

Occupational therapist Neuroanatomy: an illustrated colour text

(2nd ed. They enable individuals across the lifespan by optimizing their abilities to perform activities that are meaningful to them ("occupations"). Edinburgh; New York: Churchill Livingstone. Occupational therapists (OTs) are health care professionals specializing in occupational therapy and occupational science.). OTs have training in the physical, psychological, and social aspects of human functioning deriving from an education grounded in anatomical and physiological concepts, and psychological perspectives. OTs and occupational therapy assistants (OTAs) use scientific bases and a holistic perspective to promote a person's ability to fulfill their daily routines and roles. pp. 27–30. Williams & Wilkins. Human occupations include activities of daily living, work/vocation, play, education, leisure, rest and sleep, and social participation. Crossman AR, Neary D (2000)
