Speed of light Physics textbook. It is the upper limit for the speed at which information, matter, or energy can travel through space. University of Virginia. Special relativity and how it works. Relativity" (PDF). 56. The speed of light is the same for all observers, no matter their relative velocity. Retrieved 7 May 2010. p. Weinheim: The speed of light in vacuum, commonly denoted c , is a universal physical constant exactly equal to 299,792,458 metres per second (approximately 1 billion kilometres per hour; 700 million miles per hour). It is exact because, by international agreement, a metre is defined as the length of the path travelled by light in vacuum during a time interval of $1/299792458$ second. GPT-2 was created as a "direct scale-up" of GPT-1 with a ten-fold increase in both its parameter count and the size of its training dataset. It is a general-purpose learner and its ability to perform the various tasks was a consequence of its general ability to accurately predict the next item in a sequence, which enabled it to translate texts, answer questions about a topic from a text, summarize passages from a larger text, and generate text output on a level sometimes
