

Microprocessor 8086 Mazidi

Reset (computing) It is usually done in response to an error condition when it is impossible or undesirable for a processing activity to proceed and all error recovery mechanisms fail. When a HIGH In a computer or data transmission system, a reset clears any pending errors or events and brings a system to normal condition or an initial state, usually in a controlled manner. initiates a hard reset, and holding the button turns the system off. A computer storage program would normally perform a "reset" if a command times out and error recovery schemes like retry or abort also fail. The 8086 microprocessors provide RESET pin that is used to do the hardware reset
