Timeline of computing 2000–2009 "Google buys YouTube for \$1. For narratives explaining the overall developments, see the history of computing. 65 billion". 3 June 2013. Archived from the original on This article presents a detailed timeline of events in the history of computing from 2000 to 2009. "Asus Eee PC Series Announced - Laptoping". NBC News. 9 October 2006 3b9a3f336f

Underclocking Earlier models of the Asus Eee PC used a 900 MHz Intel Celeron M processor underclocked to 630 MHz. Underclocking is the opposite of overclocking. "advanced" settings of a power management plan. Underclocking Underclocking, also known as downclocking, is modifying a computer or electronic circuit's timing settings to run at a lower clock rate than is specified. Underclocking is used to reduce a computer's power consumption, increase battery life, reduce heat emission, and it may also increase the system's stability, lifespan/reliability and compatibility. Underclocking may be implemented by the factory, but many computers and components may be underclocked by the end user 3b9a3f336f

Tablet computer Dragonball (68000) CPU. Tablets, being computers, have similar capabilities, but lack some input/output (I/O) abilities that others have. Also in 1996 Fujitsu released the Stylistic 1000 tablet format PC, running Microsoft Windows 95, on a 100 MHz AMD486 DX4 CPU, with A tablet computer, commonly shortened to tablet or simply tab, is a mobile device, typically with a mobile operating system and touchscreen display processing circuitry, and a rechargeable battery in a single, thin and flat package. Unlike laptops (which

have traditionally run off operating systems usually designed for desktops), tablets usually run mobile operating systems, alongside smartphones. Modern tablets are based on smartphones, the only differences being that tablets are relatively larger than smartphones, with screens 7 inches (18 cm) or larger, measured diagonally, and may not support access to a cellular network

Asus Eee PC 1215N HP Nvidia Ion was a product line of Nvidia Corporation intended for motherboards of low-cost portable computers. It used graphics processing units and chipsets intended for small products 3b9a3f336f

History of personal computers mainstream and available to consumers. Early personal computers – generally called microcomputers – were sold often in electronic kit form and in limited numbers, and were of interest mostly to hobbyists and technicians. After the development of the microprocessor, individual personal computers were low enough in cost that they eventually became affordable consumer goods. A personal computer is one intended for interactive individual use, as opposed to a mainframe computer where the end user's requests are filtered through operating staff, or a time-sharing system in which one large processor is shared by many individuals. In 2008, the MacBook Air and Asus Eee PC were released, laptops that dispense with an optical drive and hard drive The history of personal computers as mass-market consumer electronic devices began with the microcomputer revolution of the 1970s
