Prime number Primes are central in number theory
because of the fundamental theorem of arithmetic:
every natural number greater than 1 is either a prime
itself or can be factorized as a product of primes that is
unique up to their order. If A prime number (or a
prime) is a natural number greater than 1 that is not a
product of two smaller natural numbers. $a^{(p-1)/2} \pm 1$
 $\{\displaystyle a^{\{(p-1)/2\}\pm 1}$ is divisible by p
 $\{\displaystyle p\}$. A natural number greater than 1
that is not prime is called a composite number. For
example, 5 is prime because the only ways of writing it
as a product, 1×5 or 5×1 , involve 5 itself. If so, it
answers yes and otherwise it answers no. However, 4
is composite because it is a product (2×2) in which

both numbers are smaller than 4
