Normandie's novel design and lavish interiors led many to consider her the greatest of ocean liners. During service as the flagship of the CGT, she made 139 westbound transatlantic crossings from her home port of Le Havre to New York City. Normandie held the Blue Riband for the fastest transatlantic crossing at several points during her service career, during which RMS Queen Mary was her main rival.
42 103 Low-level development started in the late 1940s, emerging in the early 1950s as a guidance system for the modular Zuni rocket. This modularity allowed for the introduction of newer seekers and rocket motors, including the AIM-9C variant, which used semi-active radar homing and served as the basis of the AGM-122 Sidarm anti-radar missile. Due to the Sidewinder's infrared guidance system, the brevity... 133

North American F-86 Sabre Considered one of the best and most important fighter aircraft in that war, the F-86 is also rated highly in comparison with fighters of other eras. Although it was developed in the late 1940s and was outdated by the end of the 1950s, the Sabre proved versatile and adaptable and continued as a front-line fighter in numerous air forces. Produced by North American Aviation, the Sabre is best known as the United States' first swept-wing fighter that could counter the swept-wing Soviet MiG-15 in high-speed dogfights in the skies of the Korean War (1950-1953), fighting some of the earliest jet-to-jet battles in history. Vought's design team, led by John Russell Clark, produced the V-383, a relatively unorthodox fighter that possessed an innovative high-mounted variable-incidence wing, an area-ruled fuselage, all-moving stabilators, dog-tooth notching at the wing folds for improved yaw stability, and liberal use of titanium throughout the airframe. During June 1953, Vought received... 5aca526568

alluvial deposits used manual separation processes, such as
gold panning. The expansion of gold mining to ores that are
below the surface has led to more complex extraction
processes such as pit mining and gold cyanidation. In the 20th
and 21st centuries, large corporations produce the vast
majority of the gold mined. However, as a result of the
increasing value of gold, there are also millions of small,
artisanal miners in many parts of the Global South.
