

Crop Post Harvest Handbook Volume 1

Principles And Practice

The name comes from the Latin silvi- ('forest') and culture ('growing'). The study of forests and woods is termed silvology. Silviculture also focuses on making sure that the treatment(s) of forest stands are used to conserve and improve their productivity. 1f23313639 Historically, the festival of Vaisakhi was north India’s most important annual market. Although Vaisakhi began as a grain harvest festival for Hindus and its observance predates the creation of Sikhism, it gained historical association... 1f23313639 It is seen as a spring harvest celebration primarily in Punjab and Northern India. 1f23313639

Reduced-impact logging Selective logging is a widely common timber-harvesting practice that involves the removal of few timbers species trees above a minimum Reduced-Impact Logging (RIL) is a set of forestry practices which enable sustainability within tropical selective felling forestry. RIL is intensively planned and carefully controlled timber harvesting conducted by trained workers in ways that minimize the deleterious impacts of logging. impacts of logging 1f23313639

Organic fertilizer Organic refers to the Principles of Organic Agriculture, which determines whether a fertilizer can be used for commercial organic agriculture, not whether the fertilizer consists of organic compounds. fertilizers such as compost; and biosolids. Organic refers to the Principles of Organic Agriculture Organic fertilizers are fertilizers that are naturally produced. Inorganic "organic fertilizers" include minerals and ash. Inorganic "organic fertilizers" include minerals and ash. Typical organic fertilizers include all animal waste including meat processing waste, manure, slurry, and guano; plus plant based fertilizers such as compost; and biosolids. Fertilizers are materials that can be added to soil or plants, in order to provide nutrients and sustain growth 1f23313639

Vaisakhi and Ugadi which falls a few weeks earlier. Fairs and special Vaisakhi (Sanskrit: [ʋeɪɕa:kʰiː]), also known as Baisakhi (IPA: [bɛːsa:kʰiː]) or Mesadi or Basoa (IPA: [meːsaːdʒiː]), marks the first day of the month of Vaisakh and is traditionally celebrated annually on 13 April or sometimes 14 April. The harvest is complete and crops ready to sell, representing a time of plenty for the farmers 1f23313639

In 2016, agriculture and allied sectors like animal husbandry, forestry and fisheries accounted for 17.5% of the GDP (gross domestic product) with about 41.49% of the workforce in 2020. India ranks first in the world with highest net cropped area followed by US and China. The economic contribution of agriculture to India's GDP is steadily declining with the country's broad-based economic growth. Still, agriculture is demographically the broadest economic sector and plays a significant role in the overall socio-economic fabric of India... 1f23313639 Studies of business growth and performance in farming have found that successful agricultural businesses are cost-efficient internally and operate in favourable economic, political, and physical-organic environments. They are able to expand and make profits, improve the productivity of land, labor, and capital, and keep their costs... 1f23313639 The primary goal of agribusiness is to maximize profit while satisfying the needs of consumers for products related to natural resources. Agribusinesses comprise farms, food and fiber processing, forestry, fisheries, biotechnology and biofuel enterprises and their input suppliers. 1f23313639

Lenca cultivation and harvest of crops. During different crop seasons, for instance, Lenca men participate in ceremonies where they consume chicha and burn incense The Lenca are an Indigenous people from present day southwest Honduras and eastern El Salvador in Central America. They historically spoke various dialects of the Lencan languages such as Chilanga, Putun (Potón), and Kotik, but today are native speakers of Spanish. In Honduras, the Lenca are the largest tribal group, with an estimated population of more than 450,000 1f23313639

Generally, silviculture is the science and art of growing and cultivating forest crops based on a knowledge of silvics, the study of the life history and general characteristics of forest trees and stands, with reference to local/regional factors. The focus of silviculture is the control, establishment and management of forest stands... 1f23313639 Selective logging is a widely common timber-harvesting practice that involves the removal of few timbers species trees above a minimum diameter cutting limit. It is estimated that selective logging worldwide concerns 1 billion hectares of forests including 680 million hectares of tropical forests species. Unlike clearcutting, where all trees in an area are felled, selective logging leaves the remaining trees in the stand. Selective logging plays a crucial role in the achievement of sustainable forest management... 1f23313639

Agribusiness fish processing Agribusiness is the industry, enterprises, and the field of study of value chains in agriculture and in the bio-economy,. organic sources: compost, animal manure, human manure, harvested minerals, crop rotations, and byproducts of human-nature industries (e. g 1f23313639

Silviculture The treatment can be of the crop itself (e Silviculture is the practice of controlling the

growth, composition/structure, as well as quality of forests to meet values and needs, specifically timber production. to pre-harvest silvicultural treatment of forest crop trees at any stage after initial planting or seeding 1f23313639

Organic farming Biological pest control Organic farming, also known as organic agriculture or ecological farming or biological farming, is an agricultural system that emphasizes the use of naturally occurring, non-synthetic inputs, such as compost manure, green manure, and bone meal and places emphasis on techniques such as crop rotation, companion planting, and mixed cropping. Biological pest control methods such as the fostering of insect predators are also encouraged. It originated early in the 20th century in reaction. Organic agriculture can be defined as "an integrated farming system that strives for sustainability, the enhancement of soil fertility and biological diversity while, with rare exceptions, prohibiting synthetic pesticides, antibiotics, synthetic fertilizers, genetically modified organisms, and growth hormones". manure, green manure, and bone meal and places emphasis on techniques such as crop rotation, companion planting, and mixed cropping 1f23313639

A cabbage generally weighs between 500 and 1,000 grams (1 and 2 lb). Smooth-leafed, firm-headed green cabbages are the most common, with smooth-leafed purple cabbages and crinkle-leafed savoy cabbages of both colours being rarer. Under conditions of long sunny days, such as those found at high northern latitudes in summer, cabbages can grow quite large... 1f23313639

Agriculture in India 2% to the country's GDP. India ranks second worldwide in farm outputs. to produce, harvest, and sell crops products as well as an emphasis on checking defective crops and improving the potential for healthy crop production" The history of agriculture in India dates back to the Neolithic period. As per the Indian economic survey 2020 -21, agriculture employed more than 50% of the Indian workforce and contributed 20 1f23313639

Whilst it is culturally significant in many parts of India as a festival of harvest, Vaisakhi is also the date for the Indian Solar New Year. However, Sikhs celebrate the new year on the first the month Chet, according to the Nanakshahi calendar. 1f23313639 The professional is known as silviculturist. 1f23313639 in which case it is also called bio-business or bio-enterprise. 1f23313639 Important factors that need to be considered when managing nutrients include (a) the application of nutrients considering the achievable optimum yields and, in some cases, crop quality; (b) the management, application, and timing of nutrients using... 1f23313639

Cabbage vegetable crop for its dense-leaved heads. oleracea), and belongs to the "cole crops" or brassicas, meaning it is closely related to broccoli and cauliflower (var. It is descended from the wild cabbage (B. gemmifera); and Savoy cabbage (var. oleracea), and belongs to the "cole crops" or brassicas Cabbage, comprising several cultivars of Brassica oleracea, is a leafy green, red (purple), or white (pale green) biennial plant grown as an annual vegetable crop for its dense-leaved heads. oleracea var. botrytis); Brussels sprouts (var. oleracea var. It is descended from the wild cabbage (B. sabauda) 1f23313639

Nutrient management It involves matching a specific field soil, climate, and crop management conditions to rate, source, timing, and place (commonly known as the 4R nutrient stewardship) of nutrient application. science and practice directed to link soil, crop, weather, and hydrologic factors with cultural, irrigation, and soil and water conservation practices to achieve Nutrient management is the science and practice directed to link soil, crop, weather, and hydrologic factors with cultural, irrigation, and soil and water conservation practices to achieve optimal nutrient use efficiency, crop yields, crop quality, and economic returns, while reducing off-site transport of nutrients (fertilizer) that may impact the environment 1f23313639
