Abortion "Unsafe abortion: global and regional incidence,

trends, consequences, and challenges". Common reasons for inducing an abortion are birth-timing and limiting family size.

Abortion occurring without intervention is known as spontaneous abortion or "miscarriage", and occurs in roughly 30–40% of all pregnancies. Journal of Obstetrics and Gynaecology Canada. Other reasons include maternal health, an inability to afford a child, domestic violence, lack of support, feelings of being too young, wishing to complete an education or advance a career, and not being able, or willing, to raise a child conceived as a result of rape or incest. The unmodified word abortion generally refers to induced abortion, or deliberate actions to end a pregnancy. 31 (12): 1149–1158 Abortion is the termination of a pregnancy by removal or expulsion of an embryo or fetus 88bfbe0b5

Risk factors include obstructed labor, poor access to medical care, malnutrition, and teenage pregnancy. The underlying mechanism is poor blood flow to the affected area for a prolonged period of time. Diagnosis is generally based on symptoms and may be supported by use of methylene blue. 88bfbe0b5 To accommodate smoother penetration of the vagina during sexual intercourse or other sexual activity, vaginal moisture increases during sexual arousal in human females and other female mammals. This increase in moisture provides vaginal lubrication, which reduces friction. The texture of the vaginal walls creates... 88bfbe0b5

Placenta praevia The bleeding is bright red and tends not to be associated with pain. Journal of Obstetrics and Gynaecology. Voigt, S; Htwe, TT (2011). 3109/01443615. Complications for

the baby may include fetal growth restriction. doi:10. Symptoms include vaginal bleeding in the second half of pregnancy. 31 (1): 1–6. "Management of placenta praevia and accreta".

2010 In placenta praevia (or placenta previa), the placenta attaches inside the uterus in a position that partially or completely covers the cervical opening. Complications may include placenta accreta, dangerously low blood pressure, or bleeding after delivery 88bfbe0b5

Risk factors include pregnancy at an older age and smoking as well as prior cesarean section, labor induction, or termination of pregnancy. Diagnosis is by ultrasound. It is classified as a complication of pregnancy. 88bfbe0b5 The most common childbirth method worldwide is vaginal delivery. It involves four stages of labour: the shortening and opening of the cervix during the first stage, descent and birth of the baby during the second, the delivery of the placenta during the third, and the recovery of the mother and infant during the fourth stage, which is referred to as the postpartum. The first stage... 88bfbe0b5
