Electrolysis of water Archived from the original on 20 December 2004. Retrieved 20 November 2005. "Electrolysis of Water". "Electrolysis of Water" Electrolysis of water is using electricity to split water into oxygen (O2) and hydrogen (H2) gas by electrolysis. Separately pressurised into convenient "tanks" or "gas bottles", hydrogen can be used for oxyhydrogen welding and other applications, as the hydrogen / oxygen flame can reach approximately 2,800°C. Experiments on Electrochemistry. Hydrogen gas released in this way can be used as hydrogen fuel, but must be kept apart from the oxygen as the mixture would be extremely explosive 59dc69858a

Electrolysis Electrolysis is commercially important as a stage in the separation of elements from naturally occurring sources such as ores using an electrolytic cell. E. Vayeanas, R. 42 (42 ed. Vol. Modern Aspects of Electrochemistry. The word "lysis" means to separate or break, so in terms, electrolysis would mean "breakdown via electricity. New York: In chemistry and manufacturing, electrolysis is a technique that uses direct electric current (DC) to drive an otherwise non-spontaneous chemical reaction. G. The voltage that is needed for electrolysis to occur is called the decomposition potential. Reduction on Metal Electrodes".).). White and M. Gamboa-Aldeco (ed. ". In C 59dc69858a

Typically 1.5 volts is required. Electrolysis is rare in industrial applications since hydrogen can be produced less expensively from fossil fuels.
