

Applied Partial Differential Equations Haberman 4th Edition

2 A function

Superposition principle So that if input A produces response X, and input B produces response Y, then input (A + B) produces response (X + Y). Haberman, Richard (2004). Applied Partial Differential Equations. 2. Prentice Hall. Superposition The superposition principle, also known as superposition property, states that, for all linear systems, the net response caused by two or more stimuli is the sum of the responses that would have been caused by each stimulus individually. Crystal Lattices, McGraw-Hill, New York, p. ISBN 978-0-13-065243-0

$$F(x) = F_1(x) + F_2(x)$$

that satisfies the superposition principle is called a linear function. Superposition can be defined by two simpler properties: additivity
