Social inequality Inequalities in health are not, however, only related to access to health care. Even if everyone had the same level of access Social inequality occurs when resources within a society are distributed unevenly, often as a result of inequitable allocation practices that create distinct unequal patterns based on socially defined categories of people. Social inequality usually implies the lack of equality of outcome,
but may alternatively be

Social determinants of health in poverty Daily living conditions work together with these structural drivers to result in the social determinants of health. determinants of health in poverty describe the factors that affect impoverished populations' health and health inequality. Inequalities in health stem from The social determinants of health in poverty describe the factors that affect impoverished populations' health and health inequality. The majority of people around the globe do not meet their potential best health because of a "toxic combination of bad policies, economics, and politics". Inequalities in health stem from the conditions of people's lives, including living conditions, work environment, age, and other social factors, and how these affect people's ability to respond to illness.

These conditions are also

systems of publicly funded health care, informally called Medicare. It is guided by the provisions of the Canada Health Act of 1984, and is universal. "Canada: Geographic variations in health care"

Factors that drive overuse include paying health professionals more to do more (fee-for-service), defensive medicine to protect against litigiousness, and insulation from price sensitivity in instances where the consumer is not the payer—the patient receives goods and services but insurance pays for them (whether public insurance, private, or both). Such factors leave many actors in the system (doctors, patients, pharmaceutical...
