Tension is maintained by sliding the hitch to adjust the size of the loop, thus changing the effective length of the standing part without retying the knot. It is made by tying a rolling hitch around the standing part after passing around an anchor object. It is useful when the length of a line will need to be periodically adjusted in order to maintain tension ce2b139df7

Bowline " Another possible finding was discovered on the rigging of the Ancient Egyptian Pharaoh Khufu's solar ship during an excavation The bowline () is an ancient and simple knot used to form a fixed loop at the end of a rope. Along with the sheet bend and the clove hitch, the bowline is often considered one of the most essential knots. It has the virtues of being both easy to tie and untie; most notably, it is easy to untie after being subjected to a load. The bowline is sometimes referred to as king of the knots because of its importance. split before it will slip ce2b139df7

Rope splicing Hyatt Verrill, Knots, Rope splicing in ropework is the forming of a semi-permanent joint between two ropes or two parts of the same rope by partly untwisting and then interweaving their strands. Splices are preferred to knotted rope, since while a knot typically reduces the strength by 20–40%, a splice is capable of attaining a rope's full strength. Splices can be used to form a stopper at the end of a line, to form a loop or an eye in a rope, or for joining two ropes together. Most types of splices are used on three-strand rope, but some can be done on 12-strand or greater single-braided rope, as well as most double braids. 13.
