Dive computer A secondary function is to record the dive profile, warn the diver when certain events occur, and provide useful information about the environment. consumption. Dive computers are a development from decompression tables, the diver's watch and depth gauge, with greater accuracy and the ability to monitor dive profile data in real time. The prototype mechanical analogue Foxboro Decomputer Mark I, was produced by the Foxboro Company in 1955, and evaluated by the US Navy Experimental A dive computer, personal decompression computer or decompression meter is a device used by an underwater diver to measure the elapsed time and depth during a dive and use this data to calculate and display an ascent profile which, according to the programmed decompression algorithm, will give a low risk of decompression sickness 749fd30074
