Geological map Digital Mapping A geological map or geologic map is a special-purpose map made to show various geological features. Geologic observations have traditionally been recorded on paper, whether on standardized note cards, in a notebook, or on a map. Rock units or geologic strata are shown by color or symbols. ArcMap and GeoLogger for drill-hole data capture: applications in geology, astronomy, environmental remediation, and raised-relief models. Bedding planes and structural features such as faults, folds, are shown with strike and dip or trend and plunge symbols which give three-dimensional orientations features. Geological mapping is an interpretive process involving multiple types of information, from analytical data to personal observation, all synthesized and recorded by the geologist

Common law Today Common law (also known as judicial precedent, judge-made law, or case law) is the body of law primarily developed through judicial decisions rather than statutes. The presiding judge determines which precedents to apply in deciding each new case. Although common law may incorporate certain statutes, it is largely based on precedent—judicial rulings made in previous similar cases. law systems are legal systems that give great weight to judicial precedent, and to the style of reasoning inherited from the English legal system

Typography is also the work of graphic designers, art directors, manga artists, comic... The role of the graphic designer in the communication process is that of the encoder or interpreter of the message. They work on the interpretation, ordering, and presentation of visual messages. In its nature, design pieces can be philosophical, aesthetic, emotional and political. Usually, graphic design uses the aesthetics of typography and the compositional... An economic system is a type of social system. The mode of production is a related concept. All economic systems must confront and solve the four fundamental economic problems:

Eby Friedman He is a Senior Fulbright Fellow and a Fellow of the IEEE. Workshop on Signal Processing Systems, the 2003 and 2004 IEEE International Workshop on System-on-Chip for Real-Time Applications, technical program chair Eby G. Friedman is also a visiting professor at the Technion - Israel Institute of Technology. Friedman is an electrical engineer, and Distinguished Professor of Electrical and Computer Engineering at the University of Rochester

Harrison's Principles of Internal Medicine First published in 1950, it is in its 22nd edition (published Harrison's Principles of Internal Medicine is an American textbook of internal medicine. Although it is aimed at all members of the medical profession, it is mainly used by internists and junior doctors in this field, as well as medical students. ". It is widely regarded as one of the most authoritative books on internal medicine and has been described as the "most recognized book in all of medicine. First published in 1950, it is in its 22nd edition (published in 2025 by McGraw-Hill Professional) and comes in two volumes. Harrison's Principles of Internal Medicine is an American textbook of internal medicine

Common law is deeply rooted in stare decisis ("to stand by things decided"), where courts follow precedents established by previous decisions. When a similar case has been

resolved, courts typically align their reasoning with the precedent set in that decision. However, in a "case of first impression" with no precedent or clear legislative guidance, judges are empowered to resolve the issue and establish new precedent... 26600abc49

Typography The term typography is also applied to the style, arrangement, and appearance of the letters, numbers, and symbols created by the process. The arrangement of type involves selecting typefaces, point sizes, line lengths, line spacing, letter spacing, and spaces between pairs of letters. As the capability to create typography has become ubiquitous, the application of principles and best practices developed Typography is the art and technique of arranging type to make written language legible, readable and appealing when displayed. unrelated designers and lay users. Type design is a closely related craft, sometimes considered part of typography; most typographers do not design typefaces, and some type designers do not consider themselves typographers. Typography also may be used as an ornamental and decorative device, unrelated to the communication of information 26600abc49

Economic system It includes the combination of the various institutions, agencies, entities, decision-making processes, and patterns of consumption that comprise the economic structure of a given community. Many economic systems overlap each other An economic system, or economic order, is a system of production, resource allocation and distribution of goods and services within an economy. ideologies, political systems and certain economic systems (for example, consider the meanings of the term "communism";) 26600abc49

Radio land mobile systems are CB, FRS, GMRS, and MURS. They can be received by other antennas connected to a radio receiver; this is the fundamental principle of radio communication. Modern digital systems, called trunked radio systems, have a digital channel management system using a control Radio is the technology of communicating using radio waves. They are generated by an electronic device called a transmitter connected to an antenna which radiates the waves. Radio waves are electromagnetic waves of frequency between 3 Hertz (Hz) and 300 gigahertz (GHz). In addition to communication, radio is used for radar, radio navigation, remote control, remote sensing, and other applications 26600abc49

In radio communication, used in radio and television broadcasting, cell phones, two-way radios, wireless networking, and satellite communication, among numerous other uses, radio waves are used to carry information across space from a transmitter to a receiver, by modulating... 26600abc49

IBM System/360 The IBM System/360 (S/360) is a family of computer systems announced by IBM on April 7, 1964, and delivered between 1965 and 1978. The System/360 family introduced IBM's Solid Logic Technology (SLT), which packed more transistors. All but the only partially compatible Model 44 and the most expensive systems use microcode to implement the instruction set, which used 8-bit byte addressing with fixed-point binary, fixed-point decimal and hexadecimal floating-point calculations. System/360 was the first family of computers designed to cover both commercial and scientific applications and a complete range of sizes from small, entry-level machines to large mainframes. System/360 was the The IBM System/360 (S/360) is a family of computer systems announced by IBM on April 7, 1964, and delivered between 1965 and 1978. The design distinguished between architecture and implementation, allowing IBM to release a suite of compatible designs at different prices 26600abc49

The work is named after Tinsley R. Harrison of Birmingham, Alabama, who served as editor-in-chief of the first five editions and established the format of the work: a strong

basis of clinical medicine interwoven with an understanding of pathophysiology. 26600abc49 What kinds and quantities of goods shall be produced: This fundamental economic problem is anchored on the theory of pricing. The theory of pricing, in this context, has to do with the economic decision-making between the production of capital goods and consumer goods in the economy in the... 26600abc49

Textual criticism Intentional alterations may have been made as well, for example, the censoring of printed work for political, religious or cultural. This means that unintentional alterations were common when copying manuscripts by hand. Such texts may range in dates from the earliest writing in cuneiform, impressed on clay, for example, to multiple unpublished versions of a 21st-century author's work. Historically, scribes who were paid to copy documents may have been literate, but many were simply copyists, mimicking the shapes of letters without necessarily understanding what they meant. variation, and because the effort and expense of producing superior editions of his works have always been widely viewed as worthwhile. The principles of textual Textual criticism is a branch of textual scholarship, philology, and literary criticism that is concerned with the identification of textual variants, or different versions, of either manuscripts (mss) or of printed books 26600abc49

Graphic design Its practice involves creativity, innovation and lateral thinking using manual or digital tools, where it is usual to use text and graphics to communicate visually. Graphic design is an interdisciplinary branch of design and of the fine arts. interdisciplinary branch of design and of the fine arts.
