

Big Java Early Objects 5th Edition

HTML element deprecated in favor of `<object>`, as it could only be used with Java applets, and had accessibility issues. An HTML element is a type of HTML (HyperText Markup Language) document component, one of several types of HTML nodes (there are also text nodes, comment nodes and others). `</applet>` (deprecated) Embeds a Java applet in the page. The first used version of HTML was written by Tim Berners-Lee in 1993 and there have since been many versions of HTML. The current de facto standard is governed by the industry group WHATWG and is known as the HTML Living Standard.

Prolog library bridge between Java and Prolog, implementing bi-directional predicate/method calling between both languages. Java objects can be mapped into Prolog. Prolog is a logic programming language that has its origins in artificial intelligence, automated theorem proving, and computational linguistics.

JSON is a language-independent data format. It was derived from JavaScript, but many modern programming languages include code to generate and parse JSON-format data. JSON filenames use the extension .json. 760f4de3ba Prolog has its roots in first-order logic, a formal logic. Unlike many other programming languages, Prolog is intended primarily as a declarative programming language: the program is a set of facts and rules, which define relations. A computation is initiated by running a query over the program. 760f4de3ba At its beginning, the museum was largely based on the collections of the Anglo-Irish physician and scientist Sir Hans Sloane. It opened to the public in 1759, in Montagu House, on the site of the current building. The museum's expansion over the following 250 years was largely a result of British colonisation and resulted... 760f4de3ba
