In such a frame, the laws of nature can be observed without the need to correct for acceleration. acceleration azimuthal Morin. to Classical Mechanics. Giancoli (2007). p. Physics In classical physics and special relativity, an inertial frame of reference (also called an inertial space or a Galilean reference frame) is a frame of reference in which objects exhibit inertia: they remain at rest or in uniform motion relative to the frame until acted upon by external forces. All frames of reference with zero acceleration are in a state of constant rectilinear motion (straight-line motion) with respect to one another. In such a frame, an object with zero net force acting on it, is perceived to move with a constant velocity, or, equivalently, Newton's first law of motion holds. Such frames are known as inertial. Some physicists, like Isaac Newton, originally thought that one of... 92cfb0631b Village pump (assistance) archive 92cfb0631b Idea lab 92cfb0631b
