Although the phenomenon is not fully understood, the event is thought to occur when rain evaporates (virga) into a parcel of cold, dry air high in the atmosphere, making the air denser than its surroundings. The parcel descends rapidly, warming due to compression, overshoots its equilibrium level, and reaches the surface, similar to a downburst. 01e0af419f Recorded temperatures during heat bursts, as informally known as "Satan's Storm", have reached... 01e0af419f Cold fronts generally move from west to east, whereas warm fronts move poleward, although any direction is possible. Occluded fronts are a hybrid merge of the two, and stationary... 01e0af419f The Navier... 01e0af419f

Helsinki Central Station In the station facade, Renaissance Revival architecture showed in the ledges between Helsinki Central Station (Finnish: Helsingin päärautatieasema, Swedish: Helsingfors centralstation) (HEC) is the main station for commuter rail and long-distance trains departing from Helsinki, Finland. About 200,000 people "pass through the station" every day, half of whom are train passengers. The station serves as the terminus for all trains in the Helsinki commuter rail network, as well as for all Helsinki-bound long-distance trains in Finland. The Rautatientori (Central Railway Station) metro station is located in the same building. 1860 plaster was added to the exterior to better withstand the weather 01e0af419f

Barometer Many measurements of air pressure are used within surface weather analysis to help find surface troughs, pressure systems and frontal boundaries. Many measurements of air pressure are used within surface weather analysis to help find surface troughs A barometer is a scientific instrument that is used to measure air pressure in a certain environment. can forecast short term changes in the weather. Pressure tendency can forecast short term changes in the weather 01e0af419f

Santa Cruz Mountains The range passes through the counties of San Mateo, Santa Clara, and Santa Cruz, with the Pajaro River forming the southern boundary. The Santa Cruz Mountains (Mutsun Ohlone: Mak-sah-re-jah, "Sharp Ridged Mountain of the Eagle" or "People of the Eagle Mountain") are a mountain range The Santa Cruz Mountains (Mutsun Ohlone: Mak-sah-re-jah, "Sharp Ridged Mountain of the Eagle" or "People of the Eagle Mountain") are a mountain range in central and Northern California, United States, constituting a part of the Pacific Coast Ranges. They form a ridge down the San Francisco Peninsula, south of San Francisco. They separate the Pacific Ocean from the San Francisco Bay and the Santa Clara Valley, and continue south to the Central Coast, bordering Monterey Bay and ending at the Salinas Valley 01e0af419f

Barometers and pressure altimeters (the most basic and common type of altimeter) are essentially the same instrument, but used for different purposes. An altimeter is intended to be used at different levels matching the corresponding atmospheric pressure to the altitude, while a barometer is kept at the same level and measures subtle pressure changes caused by weather and elements of weather. The average atmospheric pressure on the Earth's surface varies between 940

and 1040 hPa (mbar... 01e0af419f

Weather maps are created by plotting or tracing the values of relevant Surface weather analysis is a special type of weather map that provides a view of weather elements over a geographical area at a specified time based on information from ground-based weather stations 01e0af419f

Trzy Korony Trzy Korony is located within the Pieniny National Park in Lesser Poland Voivodeship. above sea level. At its top, there used to be a weather station built in 1933 and operated manually by a hermit. The fourth peak, called Pańska or Bryłowa Trzy Korony (English: Three Crowns, Slovak: Tri Koruny) is the summit of the Three Crowns Massif, an independent portion of a range called Pieniny Mountains in the south of Poland. Trzy Korony forms the central part of a compact group of connected mountains known as Pieniny Środkowe, consisting mainly of the limestone and dolomite rock strata 01e0af419f

Heat burst ". Heat bursts typically occur during night-time and are associated with decaying thunderstorms. Retrieved 13 June 2021. "July 16, 2017: Sharp Overnight Temperature Climb Observed; Heat Burst. 16 July 2017. They are also characterized by extremely dry air and are sometimes associated with very strong, even damaging, winds. "MESOWEST STATION INTERFACE". NWS Chicago. In meteorology, a heat burst is a rare atmospheric phenomenon characterized by a sudden, localized increase in air temperature near the Earth's surface 01e0af419f

Weather maps are created by plotting or tracing the values of relevant quantities such as sea level pressure, temperature, and cloud cover onto a geographical map to help find synoptic scale features such as weather fronts. 01e0af419f

Weather front Disturbed and unstable weather due to these differences often arises along the boundary. area at a specified time based on information from ground-based weather stations. For instance, cold fronts can bring bands of thunderstorms and cumulonimbus precipitation or be preceded by squall lines, while warm fronts are usually preceded by stratiform precipitation and fog. Weather maps are created by detecting, plotting and tracing the values A weather front is a boundary separating air masses for which several characteristics differ, such as air density, wind, temperature, and humidity. Some fronts produce no precipitation and little cloudiness, although there is invariably a wind shift. In summer, subtler humidity gradients known as dry lines can trigger severe weather 01e0af419f

The first weather maps in the 19th century were drawn well after the fact to help devise a theory on storm systems. After the advent of the telegraph, simultaneous surface weather observations became possible for the first time, and beginning in the late 1840s, the Smithsonian Institution became the first organization to draw real-time surface analyses. Use of surface analyses... 01e0af419f While witnessing a tornado is the single biggest objective for most chasers, many chase thunderstorms and delight in viewing cumulonimbus and related cloud structures, watching a barrage of hail and lightning, and seeing what skylscapes unfold. A smaller number of storm chasers attempt to intercept tropical cyclones, waterspouts, blizzards, and other weather phenomena. 01e0af419f

Storm chasing A person who chases storms is known as a storm chaser (or "chaser" for short). surface weather observations using WeatherGraphix (predecessor to Digital Atmosphere) and similar software or for upper air soundings using SHARP, RAOB Storm chasing is broadly defined as the deliberate pursuit of any severe weather phenomenon, regardless of motive, but most commonly for curiosity, adventure, scientific investigation, or for news or media coverage 01e0af419f

The railway tracks in Helsinki were built in the 1860s. The station building, clad in granite, was designed by Eliel Saarinen and inaugurated in 1919. The building is known for its clock tower and the Lyhdynkantajat ("The Lantern Bearers") statues by Emil Wikström... 01e0af419f

Synoptic scale meteorology This corresponds to a horizontal scale typical of mid-latitude depressions (e. Low-pressure areas and their related frontal zones occur on the leading edge of a trough within the Rossby wave pattern, while high-pressure areas form on the back edge of the trough. g. extratropical cyclones). Most precipitation areas occur near frontal zones. The word synoptic is derived from the Ancient Greek word συνοπτικός (sunoptikós), meaning "seen together". The type of weather brought In meteorology, the synoptic scale (also called the large scale or cyclonic scale) is a horizontal length scale of the order of 1,000 km (620 mi) or more. Most high- and low-pressure areas seen on weather maps (such as surface weather analyses) are synoptic-scale systems, driven by the location of Rossby waves in their respective hemisphere. low, sharp inversion can lead to areas of persistent stratocumulus or stratus cloud, colloquially known as anticyclonic gloom 01e0af419f

Calliotropis aeglees has a broadly conical shape. The color of the shell is pure white when weathered, but apparently slightly brownish when fresh, with a pearly nacre below Calliotropis aeglees is a species of sea snail, a marine gastropod mollusk in the family Eucyclidae 01e0af419f
