Oswald efficiency number (2006). P. , Aircraft Design: A Conceptual Approach, Section 12. 6 (Fourth edition) Raymer, Daniel P. Aircraft Design: A Conceptual Approach, Fourth edition The Oswald efficiency, similar to the span efficiency, is a correction

factor that represents the change in drag with lift of a three-dimensional wing or airplane, as compared with an ideal wing having the same aspect ratio and an elliptical lift distribution

Situation awareness (1993). It is also defined as adaptive, externally-directed consciousness focused on acquiring knowledge about a dynamic task environment and directed action within that environment. Proceedings of 12th IEEE/AIAA Digital Avionics Systems Conference (DASC), 318-323. Adam, E. C. Dominguez, C. , Vidulich Situational awareness or situation awareness, often abbreviated as SA is the understanding of an environment, its elements, and how it changes with respect to time or other factors. Fighter cockpits of the future. It is also defined as the perception of the elements in the environment considering time and space, the understanding of their meaning, and the prediction of their status in the near future

Because the wind is blowing across the runway, the aircraft has to either roll or yaw into the wind to be able to approach down the runway's centerline. As the aircraft transitions from descent to touchdown, the roll and/or yaw have to be countered to land smoothly and stay on the runway.

This transition can cause upsets, particularly in gusting wind. 163

Global Positioning System It is one of the global navigation satellite systems (GNSS) that provide geolocation and time information to a GPS receiver anywhere on or near the Earth where signal quality permits. Wiley Online Library. GNSS Positioning Approaches – GPS Satellite Surveying, Fourth Edition – Leick. Although the United States government created, controls, and maintains the GPS system, it is freely accessible to anyone with a GPS receiver. 2010. “GNSS Positioning Approaches”; 5653789. It does not require the user to transmit any data, and operates independently of any telephone or Internet reception, though these technologies can enhance the usefulness of the GPS positioning information. 2015 The Global Positioning System (GPS) is a satellite-based hyperbolic navigation system owned by the United States Space Force and operated by Mission Delta 31. 1109/WPNC. It provides critical positioning capabilities to military, civil, and commercial users around the world

Reliability engineering Reliability is defined as the probability that a product, system, or service will perform its intended function adequately for a specified period of time; or will operate in a defined environment without failure. Astronautics (AIAA) Air Force T&E Days Conference, Nashville, TN, December, 2005: System Reliability Prediction: towards a General Approach Using a Neural Network Reliability engineering is a sub-discipline of systems engineering that emphasizes the ability of equipment to function without failure. Reliability is closely related to availability, which is typically described as the ability of a component or system to function at a specified moment or interval of time a7461c80c4
