At the beginning of the 20th century some ships communicated by underwater bells as well as using the system for navigation. Submarine signals were at the time competitive with the primitive maritime radionavigation. The later Fessenden oscillator allowed communication... 1676f68c77

Underwater acoustic communication There are several ways of employing such communication but the most common is by using hydrophones. Compared to terrestrial communication, underwater communication has low data rates because it uses acoustic waves instead of electromagnetic waves. Underwater acoustic communication is a technique of sending and receiving messages in water. Catipovic, and J. A. Proakis, "Reduced-complexity spatial and temporal processing of underwater acoustic communication signals," J. Acoust. G. Soc. Underwater

communication is difficult due to factors such as multi-path propagation, time variations of the channel, small available bandwidth and strong signal attenuation, especially over long ranges
