Hydrography of the Biella region In addition to irrigation, surface water is also used in the Biella area to serve the region's numerous industries and for potable water use, because the area is densely inhabited and groundwater capture is insufficient. In addition to the natural bodies of water, there are several irrigation canals in the plains built mainly to support rice cultivation and some reservoirs built in the foothills. Hydroelectric use, on the other hand, is very limited and is substantially confined to the Sessera Valley. idrogeologica di un sistema acquifero fluvioglaciale per la produzione di acque minerali.
