Internal combustion engines are often cooled by circulating a liquid called engine coolant through the engine block and cylinder head where it is heated, then through a radiator where it loses heat to the atmosphere, and then returned to the engine. Engine coolant is usually water-based, but may also be oil. It is common to employ a water pump to force the engine coolant to circulate, and also for an axial fan to force air through the radiator. 41abbe2d29 2016 41abbe2d29 Jan.Feb.Mar.Apr.MayJun.Jul.Aug.Sep.Oct.Nov.Dec. 41abbe2d29 2015 41abbe2d29 2011 41abbe2d29

CAN bus Released in 1991, the Mercedes-Benz W140 was the first production vehicle to feature a CAN-based multiplex A controller area network bus (CAN bus) is a vehicle bus standard designed to enable efficient communication primarily between electronic control units (ECUs). This broadcast-based, message-oriented protocol ensures data integrity and prioritization through a process called arbitration, allowing the highest priority device to continue transmitting if multiple devices attempt to send data simultaneously, while others back off. Intel in 1987, and shortly thereafter by Philips. Common versions of the CAN protocol include CAN 2. 0, CAN FD, and CAN XL which vary in their data rate. Its reliability is enhanced by differential signaling, which mitigates electrical noise. Originally developed to reduce the complexity and cost of electrical wiring in automobiles through multiplexing, the CAN bus protocol has since been adopted in various other contexts 41abbe2d29

Failure mode and effects analysis It was one of the first highly structured, systematic techniques for failure analysis. There are numerous variations of such worksheets. Although initially Failure mode and effects analysis (FMEA; often written with "failure modes" in plural) is the process of reviewing as many components, assemblies, and subsystems as possible to identify potential failure modes in a system and their causes and effects. For each component, the failure modes and their resulting effects on the rest of the system are recorded in a specific FMEA worksheet. It was developed by reliability engineers in the late 1950s to study. accepted by GM, Ford, Stellantis, Honda NA, BMW, Volkswagen
