Congenital adrenal hyperplasia Lawson Wilkins, "founder" of pediatric endocrinology, worked out the apparently paradoxical pathophysiology: that hyperplasia Congenital adrenal hyperplasia (CAH) is a group of autosomal recessive disorders characterized by impaired cortisol synthesis. It is one of the most common autosomal recessive disorders in humans. Most of these disorders involve excessive or deficient production of hormones such as glucocorticoids, mineralocorticoids, or sex steroids, and can alter development of primary or secondary sex characteristics in some affected infants, children, or adults. It results from the deficiency of one of the five enzymes required for the synthesis of cortisol in the adrenal cortex. middle of the 20th century e0fd900744

Estriol Basic Medical Endocrinology. Reproductive Endocrinology. Elsevier Health Sciences. Levels of estriol in women who are not pregnant are almost undetectable. ISBN 978-1-4557-2758-2. Academic Estriol (E3), also spelled oestriol, is a steroid, a weak estrogen, and a minor female sex hormone. Maurice Goodman (14 March 2003). 256–. H. It is one of three major endogenous estrogens, the others being estradiol and estrone. Relative to estradiol, both estriol and estrone have far weaker activity as estrogens. However, during pregnancy, estriol is synthesized in very high quantities by the placenta and is the most produced estrogen in the body by far, although circulating levels of estriol are similar to those of other estrogens due to a relatively high rate of metabolism and excretion. pp e0fd900744
