Offshore geotechnical engineering Oil platforms, artificial islands and submarine pipelines are examples of such structures. It is concerned with foundation design, construction, maintenance and decommissioning for human-made structures in the sea. The need for offshore developments stems from a gradual depletion of hydrocarbon reserves onshore or near the coastlines, as new fields are being developed at greater distances offshore and in deeper water, with a corresponding adaptation of the offshore site investigations. Today, there are more than 7,000 offshore platforms operating at a water depth up to and exceeding. It is concerned with foundation design, construction, maintenance and decommissioning Offshore geotechnical engineering is a

sub-field of geotechnical engineering. The seabed has to be able to withstand the weight of these structures and the applied loads. Geohazards must also be taken into account. Offshore geotechnical engineering is a sub-field of geotechnical engineering 27cbc2fbae

Geotechnical engineering materials. It also relies on knowledge of geology, hydrology Geotechnical engineering, also known as geotechnics, is the branch of civil engineering concerned with the engineering behavior of earth materials. It also relies on knowledge of geology, hydrology, geophysics, and other related sciences. It uses the principles of soil mechanics and rock mechanics to solve its engineering problems. field of civil engineering, for instance Principles of Foundation Engineering by B.M. Das. The application of this rule is limited to foundations that are square or rectangular in plan. (For circular foundations a different rule, known as the Middle Quarter Rule applies). Geotechnical engineering has applications in military engineering, mining engineering, petroleum engineering, coastal engineering, and offshore construction. The fields of geotechnical engineering and engineering geology have overlapping knowledge areas. However, while geotechnical engineering is a specialty of civil engineering, engineering geology is a specialty of geology. geophysics; The Directive Principles of State Policy are guidelines for the framing of laws by the government...
