11 9e2d6c9850 52 9e2d6c9850 40 9e2d6c9850 146 9e2d6c9850 Perl was developed by Larry Wall in 1987 as a general-purpose Unix scripting language to make report processing easier. Since then, it has undergone many changes and revisions. Perl originally was not capitalized and the name was changed to being capitalized by the time Perl 4 was released. The latest release is Perl 5, first released in 1994. From 2000 to October 2019 a sixth version of Perl was in development; the sixth version's name was changed to Raku. Both languages continue to be developed independently by different development teams which liberally borrow ideas from each...

Ford-Fulkerson algorithm pp. Fulkerson. Jon Kleinberg; Éva Tardos The Ford-Fulkerson method or Ford-Fulkerson
 algorithm (FFA) is a greedy algorithm that computes the maximum flow in a flow network. "Chapter
 8:Network Flow Algorithms". Oreilly Media. and D. ISBN 978-0-596-51624-6. 226–250. Ford Jr. It was
 published in 1956 by L. R. The name "Ford-Fulkerson" is often also used for the Edmonds-Karp algorithm, which
 is a fully defined implementation of the Ford-Fulkerson method. It is sometimes called a "method" instead of an
 "algorithm" as the approach to finding augmenting paths in a residual graph is not fully specified or it is
 specified in several implementations with different running times. Selkow (2008). Algorithms in a Nutshell. R

Flow network Selkow (2008). The amount of flow on an edge cannot exceed the capacity of the edge. ISBN 978-0-596-51624-6. pp. 226–250. A flow network can be used to model traffic in a computer network, circulation with demands, fluids in pipes, currents in an electrical circuit, or anything similar in which something travels through a network of nodes. As such, efficient algorithms. Ahuja; Thomas In graph theory, a flow network (also known as a transportation network) is a directed graph where each edge has a capacity and each edge receives a flow. A flow must satisfy the restriction that the amount of flow into a node equals the amount of flow

out of it, unless it is a source, which has only outgoing flow, or sink, which has only incoming flow.
