Friction stir welding Tailor welded blanks are friction stir welded for the Audi R8 at Riftec. It is primarily used on wrought or extruded aluminium and particularly for structures which need very high weld strength. While the tool is traversed along the joint line, it mechanically intermixes the two pieces of metal, and forges the hot and softened metal by the mechanical pressure, which is applied by the tool, much like joining clay, or dough. FSW is capable of joining aluminium alloys, copper alloys, titanium alloys, mild steel, stainless steel and magnesium alloys. Heat is generated by friction between the rotating tool and the workpiece material, which leads to a softened region near the FSW tool. More recently, it was.
