Abiogenesis Origins of Function in Biological Nucleic Acids, Proteins, and Membranes"; Archived from the original Abiogenesis is the natural process by which life arises from non-living matter, such as simple organic compounds. The transition from non-life to life has not been observed experimentally, but many proposals have been made for different stages of the process. The prevailing scientific hypothesis is that the transition from non-living to living entities on Earth was not a single event, but a process of increasing complexity involving the formation of a habitable planet, the prebiotic synthesis of organic molecules, molecular self-replication, self-assembly, autocatalysis, and the emergence of cell membranes.
