Monetary economics This branch also examines the effects of monetary systems, including regulation of money and associated financial institutions and international aspects. Economic theory, econometrics, and mathematical economics Monetary economics is the branch of economics that studies the different theories of money: it provides a framework for analyzing money and considers its functions (as medium of exchange, store of value, and unit of account), and it considers how money can gain acceptance purely because of its convenience as a public good. The discipline has historically prefigured, and remains integrally linked to, macroeconomics. General equilibrium models of monetary economies: Studies in the static foundations of monetary theory a76ba4bace

Herbert A. Simon His primary research interest was decision-making within organizations and he is best known for the theories of "bounded rationality" and "satisficing". He was at Carnegie Mellon University for most of his career, from 1949 to 2001, where he helped found the Carnegie Mellon School of Computer Science, one of the first such departments in the world. rationality, behavioral study of firms, theory of casual ordering, and the analysis of the parameter identification problem in econometrics. His research was noted for its interdisciplinary nature, spanning the fields of cognitive science, computer science, public administration, management, and political science. Administrative Behavior Herbert Alexander Simon (June 15, 1916 – February 9, 2001) was an American scholar whose work influenced the fields of computer science, economics, and cognitive psychology. He received the Turing Award in 1975 and the Nobel Memorial Prize in Economic Sciences in 1978
