The term "rare-earth" is a misnomer because they are not actually scarce, but historically it took a long time to isolate these elements.

Circular economy Geoscience A circular economy (CE), also referred to as circularity, is a model of resource production and consumption in any economy that involves sharing, leasing, reusing, repairing, refurbishing, and recycling existing materials and products for as long as possible. CE is defined in contradistinction to the traditional linear economy. Balaram, V. (2019-07-01). The concept aims to tackle global challenges such as climate change, biodiversity loss, waste, and pollution by emphasizing the design-based implementation of the three base principles of the model. "Rare earth elements: A review of applications, occurrence, exploration, analysis, recycling, and environmental impact". The main three principles required for the transformation to a circular economy are: designing out waste and pollution, keeping products and materials in use, and regenerating natural systems
