Harmony and Counterpoint Des pas sur la neige
is a musical composition by French composer
Claude Debussy. p. It is in the key of D
minor. 208. Tymoczko, Dmitri (February 21,
2011). It is the sixth piece in the composer's
first book of Préludes, written between late
1909 and early 1910. The prelude was, along
with Danseuses de Delphes, one of the preludes
Debussy believed should be played "entre
quatre-z-yeux" (literally "between four eyes")
meaning intimately, as if privately. The title
is in French and translates to "Footprints in
the Snow" The piece is 36 measures long and
takes approximately three and a half to four
and a half minutes to play bc170f76e3

been given several times: by Ichirō Satake in
the context of automorphic forms in the 1950s
under the name V-manifold; by William Thurston
in the context of the geometry of 3-manifolds
in the 1970s when he coined the name orbifold,
after a vote by his students; and by André
Haefliger in the 1980s in the context of
Mikhail Gromov's programme on CAT(k) spaces
under the name orbihedron. bc170f76e3 Pitch

Dmitri Tymoczko As a theorist, he has published more than two dozen articles dealing with topics related to contemporary tonality, including scales, voice leading, and functional harmonic norms. His music, which draws on rock, jazz, and romanticism, has been performed by ensembles such as the Amernet String Quartet, the Brentano Quartet, Janus, Newspeak, the San Francisco Contemporary Players, the Pacifica Quartet, and the pianist Ursula Oppens. His article "The Geometry of Musical Chords" was the first music-theory article ever published by the journal Science. Major scale A Geometry of Music. It is one of the diatonic scales. Carl Fischer, LLC. Like many musical scales, it is made up of seven notes: the eighth duplicates the first at double its frequency so that it is called a higher octave of the same note (from Latin "octavus", the eighth). The major scale (or Ionian mode) is one of the most commonly used musical scales, especially in Western music. "Chapter 4". Practical Manual of Harmony. Tymoczko, Dmitri (2011). Neo-Riemannian theory Science. Music Theory Online. Thus, C major and E minor triads are close by virtue of requiring only a single semitonal shift to move from one to the other. Initially, those harmonies were major and minor triads; subsequently, neo-Riemannian theory was extended to standard dissonant

sonorities as well. 10 (3). "The Geometry of Musical Chords" (PDF).

"Continuous Transformations".

Clifton (2004). 313 (5783): Neo-Riemannian theory is a loose collection of ideas present in the writings of music theorists such as David Lewin, Brian Hyer, Richard Cohn, and Henry Klumpenhouwer. Motion between proximate harmonies is described by simple transformations. Harmonic proximity is characteristically gauged by efficiency of voice leading. What binds these ideas is a central commitment to relating harmonies directly to each other, without necessary reference to a tonic. For example, motion between a C major and E minor triad, in either direction. Tymoczko, Dmitri (2006) bc170f76e3

Voice leading A Geometry of Music: Harmony and Counterpoint in the Extended Common Practice. As a result, different voicings and inversions of chords may provide smoother voice leading. ISBN 9781135043018. Oxford Studies in Music Theory. Tymoczko, Dmitri (2011). New Voice leading (or part writing) is the linear progression of individual melodic lines (voices or parts) and their interaction with one another to create harmonies, typically in accordance with the principles of common-practice harmony and counterpoint. These principles include voices sounding smooth and independent, generally minimising movement to common tones as well as steps to the closest chord tone possible, therefore minimising leaps where possible bc170f76e3

Although there is no formal upper or lower limit to this sequence, only a few of these pitches are audible to humans. bc170f76e3
