Neon glow lamps were widely used as indicator lamps in the displays of electronic instruments and appliances. The glowing portion in the lamp is a thin region near the cathode; the larger and much longer neon signs are also glow discharges, but they use the positive column which is not present in the ordinary neon lamp. They are still sometimes used for their electrical simplicity in high-voltage circuits. When sufficient voltage is applied and sufficient current is supplied between the electrodes, the lamp produces an orange glow discharge. used as indicator lamps in the displays of electronic instruments and appliances.
