Semi-automatic rifle Designed by Thomas C. The Winchester Model 1903 and the

## Winchester Model 1906 Manual

Winchester Model 1905 both operated on the blow back principle to function. This design differs from manually operated rifles such as bolt-action and lever-action rifles, which. These rifles were developed Pre-World War II, and were used throughout World War II. Johnson, the Model 1903 A semi-automatic rifle is a type of rifle that fires a single round each time the trigger is pulled while automatically loading the next cartridge. The actions of semi-automatic rifles use a portion of the fired cartridge's energy to eject the spent casing and load a new round into the chamber, readying the rifle to be fired again. Rifles are firearms designed to be fired while held with both hands and braced against the shooter's shoulder for stability. Externally similar shotguns can fire multiple pellets simultaneously through a smoothbore, while rifle barrels are rifled to spin-stabilize individual bullets
