tech 4799ab0b8d history 4799ab0b8d A properly engineered structure does not necessarily have to be extremely strong or expensive. It has to be properly designed to withstand the seismic effects while sustaining an acceptable level of damage. 4799ab0b8d Steve McKeown (talk|edit|history|logs|links|watch) (XfD|restore) 4799ab0b8d For a listing of ongoing discussions, see the dashboard. 4799ab0b8d idea lab 4799ab0b8d misc 4799ab0b8d purge 4799ab0b8d The result was keep. article n... 4799ab0b8d

Earthquake engineering Its overall goal is to make such structures more resistant to earthquakes. An earthquake (or seismic) engineer aims to construct structures that will not be damaged in minor shaking and will avoid serious damage or collapse in a major earthquake. Element Analysis software's such as CSI-SAP2000 and CSI-PERFORM-3D, MTR/SASSI, Scia Engineer-ECtools, ABAQUS, and Ansys, all of which can be used for the Earthquake engineering is an interdisciplinary branch of engineering that designs and analyzes structures, such as buildings and bridges, with earthquakes in mind 4799ab0b8d

Steve McKeown - Original deletion endorsed. If there is any new evidence, a user draft would help. - Tikiwont (talk) 16:13, 7 February 2010 (UTC)[reply] 4799ab0b8d Village pumps 4799ab0b8d 31 January 2010[edit] 4799ab0b8d

Gravity dam gravity dam is a dam constructed from concrete or stone masonry and designed to hold back water by using only the weight of the material and its resistance A gravity dam is a dam constructed from concrete or stone masonry and designed to hold back water by using only the weight of the material and its resistance against the foundation.). (In contrast, sections of an arch dam are not independently stable, and instead rely on transmitting force through neighboring sections to the abutments, often anchored into canyon walls. Gravity dams are designed so that each section of the dam is stable and independent of any other dam section 4799ab0b8d

Future of Wikinews (potential merger with Wikipedia) 4799ab0b8d The grain of each layer of boards is usually rotated 90 degrees from

that of adjacent layers and glued on the wide faces of each board, usually in a symmetric way so that the outer layers have the same orientation. An odd number of layers is most common, but there are configurations with even numbers as well (which are then arranged to give a symmetric configuration). Regular timber is an anisotropic material, meaning that the physical properties change depending on the direction at which the force is applied. By gluing layers of wood at...
